Topic

09.01 National accounts

Design: Enzo Finger Design
 Trykk: Falch Hurtigtrykk

Preface

This publication provides national accounts statistics for the years 1988-1993. The publication contains output, intermediate consumption, value added, income components and employment by industries, and consumption, gross capital formation, exports and imports. National accounts statistics covering institutional sectors are published in National Accounts 1988-1993, Institutional Sector Accounts. Regionalized figures are published in National Accounts Statistics by County 1992.

The figures presented here are final estimates from the main revision of the Norwegian national accounts, compiled according to the guidelines of the System of National Accounts 1993 and the European System of Accounts 1995. The main revision has improved the quality of national accounts by using new methods of estimation and new statistical sources. New definitions have also been introduced. Definitions and classifications of the revised national accounts are reviewed in the text, together with a description of the most important changes of the main revision.

Statistics Norway is now reestimating national accounts series for the years 1978-1987. These figures will be published in 1997.

Some principal figures have been published in the Weekly Bulletin of Statistics no. 27/95 (special issue) and no. 18/96. The Weekly Bulletin of Statistics no. 23/96 contains preliminary figures for the years 1994 and 1995. Besides, principal figures from the national accounts can be found on Internet at Statistics Norway's Web-pages.

This publication is also available with text in Norwegian: Nasjonalregnskapsstatistikk 1988-1993, Produksjon, anvendelse og sysselsetting.

Responsible head of division is Liv Hobbelstad Simpson, Division for National Accounts.

85. Imports of goods and services. Annual percentage change in volume	96
86. Imports of goods and services. Annual percentage change in prices	97

1. Introduction

The national accounts statistics are designed to provide a consistent and comprehensive survey of the national economy. The national accounts contain national aggregates, and give detailed descriptions of transactions between different sectors of the economy, including the rest of the world. The national accounts also provide information on different types of capital stocks. Statistics from many areas are utilized in the national accounts. Some parts of the national accounts are constructed more or less directly from other statistics, while other parts are based heavily on calculations and estimations.

Statistics Norway is currently undertaking a main revision of the national accounts. More than 20 years have elapsed since the last main revision, while the earlier revisions were normally undertaken every 10 years or so. Consequently, it was necessary this time to conduct a very comprehensive examination of the sources and methods of the national accounts. In addition, new definitions and classifications are introduced based on new international guidelines of the System of National Accounts 1993 (SNA 1993, published by UN, OECD, IMF, the World Bank and the Commission of the European Communities in 1993) and the European System of Accounts 1995 (ESA 1995, published by Eurostat/EC-Commission in 1996). Norway has, according to the EEA-treaty, an obligation to implement ESA 1995.

The first results from the main revision, figures for years 1988-1992, were released by summer 1995. The revisions were rather considerable for many items; gross domestic product was adjusted upwards by 9-12 per cent for these years. Statistics Norway has later on published revised final estimates for 1993, and provisional estimates for 1994 and 1995. In addition, quarterly estimates have been published according to the new system of national accounts. For the time being revised time series back to 1978 are in progress, planning for publication in 1997. Then, also in 1997, revised estimates of non-financial assets and consumption of fixed capital will be added, making it possible to arrive at net concepts for income and saving.

Definitions and classifications of the revised national accounts are reviewed below. This review is related to the figures presented in this publication, i.e. production, uses and employment. Valuation principles and methods of calculations on volume and price changes are also briefly described below. Chapter 6 contains a description of the most important changes of the main revision.

2. Definitions

2.1. GDP and production

Gross domestic product (GDP)

- = Output – Intermediate consumption + Taxes on products, net – Correction for FISIM
- = Total value added + Taxes on products, net – Correction for FISIM
- = Final consumption expenditure + Gross fixed capital formation + Changes in inventories + Exports – Imports
- = Final uses – Imports
- = Final domestic uses + Exports – Imports
- = Compensation of employees + Gross operating surplus + Taxes on production – Subsidies on production – Correction for FISIM
- = Compensation of employees + Operating surplus + Consumption of fixed capital + Taxes on production – Subsidies on production – Correction for FISIM

BNP is the Norwegian abbreviation for GDP (Gross Domestic Product). It refers to the sum of the gross values added of all units engaged in production, and consequently all income generated from production. GDP may be defined and compiled from three different main approaches (cf. the three definition blocks above), i.e. the production or output approach, the expenditure approach and the income approach. In the first block, the item "Correction for FISIM" might have been alternatively included with intermediate consumption and in the third block with gross operating surplus.

Output

Value of the goods and services that are produced from resident production. This cover market production, production for own final use, and non-market production in general government and in non-profit institutions serving households.

The term has been amended from gross output as gross/net is not distinguished for this item.

Production of goods and services (products) should not be mistaken for sale or turnover of products. Correction items such as taxes on products and subsidies on products are not included with output, but are considered as additional items to total value added of the industries in order to arrive at GDP (at market prices).

Intermediate consumption

Value of the goods and services consumed (transformed or used up) as inputs by the production process, excluding fixed assets whose consumption is recorded as consumption of fixed capital.

More precise definitions are available, in particular for drawing up the borderlines against gross fixed capital formation and against compensation of employees. Intermediate consumption relates to products consumed and not to products that are purchased.

Taxes on products

Compulsory, unrequited payments from units of production to general government as taxes payable per unit of goods and services when they are produced, delivered, sold, transferred or otherwise disposed of by their producers.

The contents of taxes on products are not much amended as a result of the revision.

Subsidies on products

Current unrequited payments that government units make to units of production as subsidies payable per unit of goods and services which they produce, sell or import.

Taxes on products, net

= Taxes on products – Subsidies on products

FISIM

Value of financial intermediation services indirectly measured, i.e. for services which are not charged directly, defined as total property income receivable by financial intermediaries minus their total interest payable, excluding the value of property income receivable from the investment of own funds.

This part of output of financial intermediation (by banks and other financial institutions) is not allocated to various uses, but is unallocated and recorded as intermediate consumption (correction item to GDP), a convention which might be changed if international agreement is reached.

Value added

The additional value created or income generated by the process of production, recorded for an industry or the total of all resident industries, and defined as the value of output less the value of intermediate consumption.

Market production and production for own final use

Production carried out by producers whose output is all or mostly all marketed, respectively retained for their own final use.

The definitions of market and non-market production are based on certain criteria. Production for own final use by industry includes agriculture and hunting, fishing, general construction of buildings, building installation and completion, dwelling services (owner-occupiers etc.), and private households with employed per-

sons. In addition, products involved in market production might also be designated as products for own final use (e.g. agricultural products, firewood, fish etc.).

Total supply

= Output + Taxes on products, net + Imports
 = Output at basic prices + Taxes on products
 – Subsidies on products + Imports

Taxes on products (and subsidies on products) include taxes (and subsidies) on products that are related to both domestic production and imports (including customs duties). Imports of individual goods are valued at cif, while total imports are valued at fob. (with a correction to cif total). In the institutional sector accounts, output is recorded at producers' prices (i.e. including taxes on products, net).

2.2. Final use categories

Final uses

= Final consumption expenditure + Gross fixed capital formation + Changes in inventories + Exports

Final consumption expenditure

= Household final consumption expenditure + Final consumption expenditure of NPISHs
 + Central government final consumption expenditure + Local government final consumption expenditure
 = Actual final consumption of households + Actual final consumption of general government

The first relationship defines total final consumption expenditure of the sectors. The second relationship sums up total consumption of goods and services acquired by the sectors, i.e. by the value of all the individual consumption of goods and services acquired by resident households irrespective of which sector is financing them, and by the value of the collective consumption services provided by general government to the community or large sections of the community.

Government final consumption expenditure

= Central government final consumption expenditure
 + Local government final consumption expenditure
 = Individual consumption of general government
 + Collective (actual final) consumption of general government

Collective consumption of general government

Government final consumption expenditure (such as general public services, defence affairs, public order and safety affairs, industry-related economic affairs and services) that do not provide a mechanism for redistributing resources among individual households.

This is a new term that relates to the introduction of two main consumption concepts. Collective consumption is the part of government consumption expenditure

that is actually acquired by the general government, while the remaining government consumption expenditure (such as education, health, social security and welfare) are expenditures incurred by general government as well, but actually acquired by households.

Consumption of goods

Household consumption expenditure that relates to households' consumption of goods.

Household consumption expenditure of goods should not be mixed up with actual consumption of goods acquired by households (not specified in tables). The difference is equal to individual consumption of goods in consumption expenditure of general government and NPISHs (minor importance since most individual consumption expenditure of these sectors relates to services).

Consumption of services

Household consumption expenditure that relates to households' consumption of services.

Household consumption expenditure of services should not be mixed up with household actual consumption of services, which has a far wider content (see above).

Household final consumption expenditure

Expenditure incurred by resident households on consumption goods and services.

Household durables and semi-durables - except expenditure on dwellings and valuables - are recorded as household consumption expenditure in the period they are acquired (purchased). Expenditure on dwellings by households constitutes gross fixed capital formation, while dwelling services (rentals) are recorded annually over the period of service lives of the dwellings as part of the household consumption expenditure.

Final consumption expenditure of NPISHs

Expenditure incurred by non-profit institutions serving households on consumption goods and services. These expenditures add up from intermediate consumption (goods and services which NPISHs need for their production of education, health, cultural and other services), compensation of employees, consumption of fixed capital, any taxes on production, while deducting receipts from sales.

Final consumption expenditure of NPISHs is treated as actual final consumption of households, i.e. total value of final consumption expenditure of NPISHs is allocated as acquired by households.

Local government final consumption expenditure

Expenditure incurred by local government on consumption goods and services. These expenditures add up - as

before - from intermediate consumption (goods and services which local government needs for its production), compensation of employees in local government, consumption of fixed capital in local government, any corresponding taxes on production, net, while deducting receipts from sales from local government to other sectors. In addition, local government final consumption expenditure includes consumption goods and services that local government has purchased (i.e. expenditure incurred) from market producers and supplied directly to households.

Local government final consumption expenditure consists of two main parts, i.e. collective (actual) final consumption of local government and individual consumption expenditure of local government which is also part of actual final consumption of households.

Central government final consumption expenditure

Expenditure incurred by central government on consumption goods and services. These expenditures add up - as before - from intermediate consumption (goods and services which central government needs for its production), compensation of employees in central government, consumption of fixed capital in central government, any corresponding taxes on production, net, while deducting receipts from sales from central government to other sectors. In addition, central government final consumption expenditure includes consumption goods and services that central government has purchased (i.e. expenditure incurred) from market producers and supplied directly to households.

Central government final consumption expenditure consists of two main parts, i.e. collective (actual) final consumption of central government and individual consumption expenditure of central government which is also part of actual final consumption of households.

Actual final consumption of households (= Actual individual consumption)

= Household final consumption expenditure + Final consumption expenditure of NPISHs + Individual consumption expenditure of central government + Individual consumption expenditure of local government

Individual consumption expenditure is exclusively related to households (i.e. only sector to acquire individualized consumption goods and services).

Gross capital formation

= Gross fixed capital formation + Changes in inventories + Net acquisitions of valuables

Net acquisitions of valuables entail an extended content of gross capital formation, but so far with poor empirical coverage for this new item. Gross capital formation

as a term diverges from the similar term gross real investment (see below) which is used to distinguish investment in non-financial assets from investment in financial assets (cf. net lending/net borrowing).

Gross real investments

Gross capital formation (including addition for the value of non-produced non-financial assets).

Gross fixed capital formation

Value of acquisitions less disposals of new or existing fixed assets. Fixed assets consist of both tangible fixed assets (dwellings, other buildings and structures, machinery and equipment, cultivated assets) and intangible fixed assets (mineral exploration, computer software and other intangible fixed assets).

Apart from extended coverage for intangible fixed assets and new valuation principle for large items (see below), the definition is more or less as before the revision. The borderline against intermediate consumption is drawn by value magnitude and not by duration as before.

Changes in inventories

Value of the entries into inventories less the value of withdrawals and the value of any recurrent losses of goods held in inventories. Goods (and services that may take a long time to produce, such as software development) are relevant for changes in inventories, also including work-in-progress, as well as work-in-progress on cultivated assets (single-use plants or livestock - also including young fish - for later slaughtering).

Net acquisitions are partly actual purchases and sales of goods, but also reflect internal transactions of the producers. In practice, changes in inventories of goods in general are determined as total supply less total other uses of each good and subsequently summed over all goods.

Exports of goods and services

Value of goods and services from resident to non-residents.

Imports of goods and services

Value of goods and services from non-residents to residents.

Export surplus

= Exports - Imports

Total uses

= Intermediate consumption + Final consumption expenditure + Gross fixed capital formation + Changes in inventories + Exports

= Final uses + Intermediate consumption

= Domestic uses + Exports

= Final domestic uses + Exports + Intermediate consumption

2.3. Income components

Compensation of employees

= Wages and salaries + Employers' social contributions

Wages and salaries

Remuneration to employees as entitled to receive from employers in respect of work done during the relevant period (before adding employers' social contributions).

Wages and salaries are both in cash and in kind.

Formerly, wages and salaries also included employers' contributions to private pension and similar schemes, which are now included in employers' social contributions. Wages and salaries in cash include pay for overtime, and sickness and maternity allowances paid by employers. Wages and salaries in kind have a much wider coverage than before the revision. Wages and salaries subsequently are distributed to households and to rest-of-the-world (i.e. for non-residents employed with resident producers, cf. foreigners on Norwegian ships and employees not fulfilling the one-year criterion to their centre of economic interest).

Employers' social contributions

Value of social contributions incurred by employers in order to obtain social benefits for their employees, paid to central government and to autonomous social security and pension funds as well as non-autonomous pension funds. They include the following sub-items: employers' contributions to National Insurance, employers' other actual social contributions (contributions to the Public Service Pension Fund, Municipal Pension Funds, other social security schemes, employers' contributions to employees with low wages and salaries, and other social contributions), and in addition, employers' imputed social contributions (which coincide with social benefits actually paid - i.e. through unfunded arrangements - from employers to present or former employees).

Other taxes on production

Taxes - except taxes on products - that resident producers incur, and that are payable to general government, as a result of engaging in production.

The contents of other taxes on production are not much amended as a result of definitional changes due to the revision.

Other subsidies on production

Subsidies - except subsidies on products - that resident producers may receive from general government, as a consequence of engaging in production.

The contents of other subsidies on production are reduced considerably as a result of definitional changes due to the revision.

Taxes on production

= Taxes on products + Other taxes on production

Subsidies on production

= Subsidies on products + Other subsidies on production

Gross operating surplus

= Gross domestic product - Compensation of employees
- Taxes on production + Subsidies on production

Gross operating surplus may also be estimated directly by using the income approach (see GDP above). Earlier, there was no distinction between operating surplus and mixed income in the household sector.

Gross operating surplus by activity

= Value added - Compensation of employees - Other taxes on production + Other subsidies on production

Operating surplus

Operating surplus is a measure of the surplus accruing from processes of production before deducting any explicit or implicit interest charges, rents or other property incomes payable on the financial assets, land or other tangible non-produced assets required to carry on the production.

2.4. Employment**Employed persons**

Average number of persons employed with resident producers. Persons employed part-time and persons temporary on leave are included.

Foreign employees engaged in domestic production, of which foreign seamen on Norwegian owned ships or ships rented from abroad are included. Numbers employed are distributed by activities, gender and employees vs. self-employed.

Full-time equivalent persons

Defined as number of persons full-time employed, plus number of persons part-time employed recalculated to full-time equivalent basis.

Numbers of full-time equivalent employees are arrived at by recalculating to full-time equivalent basis by using share of full posts or of wages as weights. Numbers of full-time equivalent self-employed are arrived at on the basis of working time of self-employed males.

Total hours worked

Hours worked in domestic production within effective and normal working hours with addition for overtime while deducting absences due to sickness, leave of absence, vacations and any labour conflicts. Hours worked are also influenced by the calendar effect (movable holidays and leap years). For self-employed, hours worked are determined as actual working hours adjusted for absence.

3. Classifications of the national accounts**3.1. Accounting system of the national accounts**

The accounting system of the national accounts contains a listing of the specifications of accounts used. The new accounting system for the revised Norwegian national accounts, to be published in 1997, is based on the international standards for national accounts SNA 1993 and ESA 1995. The accounting system gives the framework and contents for the production of national accounts statistics. The new accounting structure is not amended in a very substantial way, although several new main accounts are added, particularly in the area of income accounts and for changes in balance sheets. In addition to accounting structure, the accounting system contains a number of groupings or classifications used in the national accounts. The most important of these are described below.

3.2. Institutional sector classification

The institutional sector classification lists the main sectors of the economy, i.e. non-financial corporations, financial corporations, general government, households and rest-of-the world, with the corresponding sub-sectors. This classification is particularly important for the production and publication of national accounts statistics and balance of payments statistics, while also playing a central role for credit market statistics and financial balance sheets. For more information about the new institutional sector classification, see National Accounts 1988-1993, Institutional Sector Accounts (NOS C 341).

3.3. Activity classification of the national accounts

The activity classification used in the national accounts refers to aggregates that are based on the new Norwegian Standard Industrial Classification (SN94), which is an elaboration of the EU-standard NACE Rev.1. The detailed activity classification of the revised national accounts contains 148 industries (see appendix A), while the quarterly national accounts have much fewer industries specified. Several levels of aggregation have been introduced for publication and reporting purposes. The activity classifications used in this publication are presented in appendix B and appendix C. Most industries (142) have market production, while production for own final use is limited to 6 industries. Non-market production is relevant for 14 industries in central government, 9 (or actually 7) industries in local government and 7 industries in non-profit institutions serving households. Thus, each of these categories of production (producers) may be broken down by their respective industries. Market producers have receipts from sale that normally exceed their costs of production, which is not the case for the NPIs serving households (partly also financed by general government).

3.4. Transactions in goods and services

This is a listing of variables for which transactions of the national accounts are grouped in terms of products. The main categories are output, intermediate consumption, final consumption expenditure (and actual final consumption), gross capital formation, exports and imports. Output is distributed on market and non-market output, plus output for own final use. Non-market output has sub-categories for central government, local government and the NPISHs. The former two sub-categories define the production of general government, when also some market output in local government (water supply, sewage and refuse disposal) are added. Important consumption categories are individual consumption expenditure, collective consumption expenditure and actual final consumption - concepts which are defined above. Gross capital formation consists of former categories of gross fixed capital formation and changes in inventories, plus a new category of acquisitions less disposals of valuables (data later). A main breakdown of exports and imports follows the distinction between goods and services.

3.5. Distributive transactions

This is a listing of variables for which transactions of national accounts is relevant for the various income accounts. The main categories are wages and salaries, employers' social contributions, taxes on production, subsidies, property income, current taxes on income, wealth etc., social benefits, other current transfers and capital transfers. Components of compensation of employees (see definitions above) and taxes on production and subsidies (with components for taxes on products and other taxes on production, respectively subsidies on products and other subsidies on production) are relevant for this publication, while the other categories of distributive transactions will be mostly exposed in the publication on institutional sector accounts.

3.6. Classification of balancing items in the national accounts

This is a listing of main aggregates which are arrived at as balancing items in the national accounts and balance of payments, such as GDP, GNI, disposable income, saving, net lending/net borrowing, export surplus and external balance of current account. These are main aggregates that are among the most important concepts used in the production and presentation of national accounts and balance of payments statistics.

3.7. Classification of non-financial assets

This is a classification by type for aggregates of non-financial assets, such as tangible and intangible fixed assets, inventories, valuables, and non-produced assets, both including tangible assets such as land, subsoil assets, water resources etc. and intangible assets such as patented entities, transferable contracts etc. It classifies the various types of non-financial assets according to the structure of these main items. There are minor de-

viations between this classification and the corresponding classification used for gross capital formation by type.

3.8. Product classification of the national accounts

Product classification of the national accounts relates to aggregates of goods and services that are specified in the national accounts (see transactions in goods and services above which define those variables for which the product classification applies). The classification is based on EU's central product classification CPA - Statistical Classification of Products by Activity in the European Community (Eurostat, 21.10.1992). CPA is a grouping of products by activities, i.e. it defines characteristic products within each activity and which are thus connected to the activity classification NACE Rev.1. Excluding the products introduced for mere technical accounting reasons, the new product classification of the national accounts contains 680 aggregated goods (of which 565 are manufacturing goods) and 300 aggregated services. In the quarterly national accounts the number of products are much less.

3.9. Classification of individual consumption by purpose

This is the classification of consumption used in the national accounts for household final consumption expenditure and household actual final consumption. For publication, this classification and the more aggregated versions appear in the same hierarchal system, with groupings of 10, 35 and 112 items of consumption purposes. This new classification of individual consumption by purpose is based on the one presented in SNA 1993 and ESA 1995 (COICOP - Classification Of Individual Consumption by Purpose). COICOP will however be slightly revised in 1997.

3.10. Classification of the functions of the government

This is a classification by purpose which is applied to all types of expenses of general government, such as government final consumption expenditure, gross fixed capital formation, subsidies, property income (i.e. expenses), capital transfers and other transfers, for use in financial accounts of government and in the national accounts. This classification is based on the version of COFOG (Classification Of Functions Of the Government) which was presented in SNA 1993 and ESA 1995, but will appear in a somewhat revised version in 1997. In the national accounts, 55 COFOG-groups are specified, of which 51 groups distribute central government final consumption expenditure and 25 groups distribute local government final consumption expenditure.

3.11. Classification of the purposes of the non-profit institutions serving households

This is a minor purpose classification which applies to the expenses of the NPISHs. It is based on the international classification referred to in SNA 1993 as COPNI (Classification Of the Purposes of the Non-profit Institutions serving households), soon also to appear in a somewhat revised version. The revised national accounts specify 5 such groups of purposes.

3.12. Classification of outlays of producers by purpose

This is a purpose classification not yet developed in the Norwegian statistical system. It will have an international basis in COPP (Classification of Outlays of Producers by Purposes) - also presented in SNA 1993 - and is an alternative classification of the outlays of producers by purpose, such as sales promotion, research and development, pollution abatement and control, employee training etc.

4. Valuation

Valuation is particularly relevant for transactions in goods and services, but also to the general aspect of time of recording (cf. cash values or accruals values, and other principles in recording of statistical data). The transactions of variables to appear in this publication (the national accounts of the real economy) apply in general the accruals basis principle of recording. Thus, taxes on production and subsidies are basically recorded in accruals values and not as recorded in the government accounts (taxes on production and subsidies in cash values).

Transactions in goods and services have different price references for their recording. Output is valued at basic prices in the cases of market production and production for own final use (i.e. basic prices for similar products in market production), while non-market output (per convention) is recorded by total costs of production in lack of prices. The use categories - both intermediate consumption and final uses - are valued at purchasers' prices, including exports at fob. Total imports are also valued at fob, while valued at cif for the individual groups of products (goods). Basic prices mean that corresponding taxes on products are deducted and subsidies on products added to output recorded at producers' prices (excluding value added tax). Previously, the estimates of output were published at producers' prices (excluding VAT). However, the principle of output at basic prices has been introduced in SNA 1993 og ESA 1995 for the purpose of achieving a standard common valuation internationally and at national level.

Output at basic prices has implications such as:

- value added of an industry is "valued" at basic prices (calculated as output at basic prices less intermediate consumption at purchasers' prices)
- taxes on products (including value added tax and investment levy) and subsidies on products are not distributed by industry
- total value added of the industries also is "valued" at basic prices
- GDP is "valued" at market prices, which means that taxes on products less subsidies on products are added to total value added of the industries at basic prices
- accruals VAT (i.e. VAT on output less non-deductible VAT on intermediate consumption and other uses) is among the taxes on products to be added to arrive at GDP
- taxes and subsidies on production that are not recorded as taxes and subsidies on products (i.e. other taxes on production, other subsidies on production) are distributed by industry and thus influence the magnitudes of operating surplus of the industries (but not value added of the industries).

5. Calculations on volume and price changes

The calculation of national accounts data on changes of volume and prices mainly follows the same methods and approach as before the last main revision. Basically, constant-price estimates are calculated at prices of the previous year (in other words, changing base year every year). Subsequently, data on changes of volume are constructed in terms of growth rates and corresponding implicit data on changes of prices. In parallel, time series of indices are constructed by using 1990 = 100 as a reference year. The reference year 1990 is chosen in response to international recommendation advocating the use of years ending at 0 or 5 as base year or reference year.

Since Statistics Norway switched to annual chaining and is changing base year on annual basis (also recommended in SNA 1993 and ESA 1995) - implying also that table components do not add to the totals of the same table except for previous year as base year - Statistics Norway so far has not published constant-price estimates expressed in the prices of a reference year. In this publication, however, this kind of constant-price estimates are published according to latest international recommendations, and which would be consistent with the data on changes in volume referred to in the series of growth rates and volume indices. The chaining is carried out separately for all items (with few exceptions).

The calculation of constant-price estimates is carried out within the framework of integrated supply and use tables at current prices, by deflating (current values that

are divided by price indices) at the detailed product level. The deflation approach has in fact two dimensions, (i) differentiated by main categories of supply and use (deflating output, imports, exports and implicitly for domestic use), and (ii) differentiated through valuation (deflating current values at basic prices by price indices and implicitly determining the other value components, including adjustments against values at purchasers' prices). Constant-price estimates for aggregates of supply, uses and value added follow through adding up and balancing constant-price estimates of products. They include aggregates such as output by industry, categories of exports and imports, categories of final uses, intermediate consumption by industry, value added by industry and GDP.

This entails that the principle of double deflation is used, i.e. separate deflation of output and intermediate consumption in order to arrive at value added at constant prices as a balancing item, through a detailed input-output framework (supply and use tables). The condition of great details is linked to the condition that the individual products are as price homogeneous as possible, with a possibility for adapting to available basic statistics for values as well as prices.

6. Main revision of the national accounts

6.1. Background

The main revision, underlying the estimates in this publication, is the fourth of its kind since the national accounts were established in Norway shortly after World War II. Main revisions are the occasions into which special attention is given to the actual levels of the national accounts items, while otherwise best possible year-to-year movements have a first priority in the current national accounting work. Main revisions, therefore, should be distinguished from the normal current revisions through updating estimates from provisional to final versions of the national accounts.

This time, the main revision has been particularly comprehensive, since Statistics Norway introduced new methods of estimation, based on new basic statistics, as well as new definitions and classifications, based on revised international guidelines. The 1995 revision, no doubt, has improved the quality of the Norwegian national accounts, in particular from a better utilization of the many important statistical sources behind the national accounts estimation. In addition, this revision has included considerable enlargements, such as integrating new elements of the institutional sector accounts with real economy national accounts data.

International national accounts guidelines have been revised quite recently, in SNA 1993 published by the five international organizations United Nations, OECD, IMF, the World Bank and the Commission of the European

Communities, and in ESA 1995 in which the EU presents the same principles in a more articulated way so as to make them more binding for the European countries, Norway included. In fact, Norway was the first country to adopt ESA 1995.

The main revision also had direct impact on the compilation of balance of payments statistics, presented in Norway as an integral part of the national accounts. Balance of payments statistics follow the IMF guidelines (Balance of Payments Manual, fifth edition, 1993), which are now harmonized with SNA 1993.

The 1995 revision has quite considerably amended earlier estimates. One important reason for this is that more than 20 years have elapsed since last main revision of the national accounts was undertaken in Norway. Earlier, main revisions were normally undertaken every 10 years or so. In recent years, the direct use of main aggregates such as GDP and GNI has become more important, in particular as a reference item, and often as a financing assessment base in international economic policy. Need for best possible estimated levels means that main revisions in future should be carried out more frequently than before, say every five years.

6.2. Summary analysis of main results

Gross domestic product (GDP) has been revised upwards by 9-12 per cent compared with former estimates published for the years 1988-1993. The increase is somewhat lower for final consumption (6-9 per cent), while considerably stronger for gross capital formation (19-28 per cent). For exports and imports the revisions have been relatively modest, a downward revision for imports of 2.5 per cent in 1992 at the most. Compensation of employees has been considerably less affected (up 4-6 per cent) than is gross operating surplus (16-20 per cent). Employment figures have been moderately revised.

In the Norwegian national accounts, GDP is estimated primarily from the so-called production approach, i.e. by adding together the values added of the industries and net taxes on products etc. In the table that follows, 1990 estimates before and after the revision are compared for the main industries, also giving an estimate on the part of contribution from changes in definitions (also including classification changes) and the part of other reasons (improved statistical sources and methods). The numbers are in billion kroner. Industries are grouped according to the new industrial classification (SN94), and ranked by 1990 size of value added (revised).

The table illustrates that approximately 10 per cent of the total GDP increase of 61.5 billion kroner is caused by definitional changes, while the remaining 90 per cent is due to other causes (statistical sources,

Value added at basic prices, taxes on products etc. New and old figures; the difference distributed on definitional changes and changes from other reasons. 1990. Billion kroner

	New	Old	Diff.	Def.	Other
C Oil and gas extraction, mining	90.8	90.3	0.5	0.0	0.5
K Real estate, business activities	87.7	63.7	24.0	2.1	21.9
D Manufacturing	84.2	85.2	-1.0	-1.0	0.0
G Domestic trade, repair of goods	75.2	58.9	16.4	-1.9	18.3
I Transport and communication	71.9	65.7	6.2	0.5	5.7
N Health and social work	49.9	47.6	2.3	-0.9	3.2
L Public administration and defence	37.9	32.1	5.8	5.8	0.0
J Financial intermediation	36.1	28.0	8.1	7.1	1.0
M Education	31.7	30.2	1.5	-1.0	2.5
F Construction	31.1	27.6	3.5	-0.4	3.9
Other industries (A,B,E,H,O,P)	73.9	67.7	6.2	3.1	3.1
Value added in total industries	670.5	597.0	73.6	13.4	60.2
Value added tax	58.2	55.8	2.4	0.0	2.4
Other taxes on products	35.0	33.8	1.2	3.2	-2.0
Subsidies on products	-7.7	-0.8	-6.9	-4.6	-2.3
Correction for FISIM	-34.0	-25.2	-8.8	-5.8	-3.0
Gross domestic product (GDP)	722.1	660.6	61.5	6.2	55.3

methods). This means that about 1 percentage point of the 9.3 per cent increase in the 1990 GDP level can be related to changes in definitions. Detailed description of the definitional changes are found in Documents 96/5 Norwegian National Accounts (Chapter II: GDP from the Output Approach).

Further analysis of the revision results shows that definitional changes have had an even lower impact on gross national income (GNI) than on GDP. For 1990, GNI has been revised upwards by 57.2 billion kroner - i.e. somewhat less than for GDP - of which the estimated contribution from changes in definitions is just 2.4 billion or 0.4 per cent of GNI before the revision.

A main conclusion from the revision, therefore, is a quite considerable increase in the level of many main aggregates, while just a small part of this increase is due to changes in definitions from the transition between the old and new system of national accounts. The number of definitional changes are quite high, however, contributing partly to revision upwards and partly to a downward revision.

The implementation of new basic statistics and new methods of estimation, nevertheless, has had a great impact on the main aggregates. As indicated in the table, both value added of distributive trade and value added

of business activities have a most considerable increase from the use of new basic statistics. A main reason for the high increase for wholesale and retail trade is related to the introduction of trade margin statistics by products from the mid 1980s. For business activities, the upward revision is due to improved utilization of the production statistics (direct use). Other industries for which the quality of the estimates have been significantly improved include electricity, construction, transport industries and cultural services. As regards methods, output and consumption of dwelling services have been much amended upwards from applying a new method of approach. The production (and consumption) level is now similar to the levels of dwelling services of comparable European countries, like Germany and Netherlands, measured in terms of GDP.

Another main conclusion has been that the revision - mainly at least - has given moderate changes to the growth rates of prices and volume. In general, the price indices base has not been much amended as compared with the situation before the revision. One important change is the introduction of a price index for new dwellings in the construction compilation. GDP growth rates in volume have been revised slightly, except for 1991 by a 1.3 percentage point increase. There also was a significant increase in the growth rate for final consumption in 1991. As regards prices, the new price indices for household final consumption expenditure had the same trend of price development as shown by the official consumer price index, although differing somewhat from different weighting patterns.

A consequence from the significant increase in GDP levels, is a quite significant decrease in certain derived magnitudes presented in terms of GDP, such as overall percentage of taxes and percentage of government foreign aid. Taxes in Norway, measured in this way, are no longer among the highest in Europe, and Norway no longer thrones at the top in governmental aid to developing countries.

6.3. Other changes

Users should observe that the national accounts tables also have been amended. It reflects partly the introduction of revised standards in the national accounts (new activity and consumption classifications etc.), and partly the implementation of new concepts following the new international guidelines. Along with the main revision some new terminology, i.e. new terms in Norwegian, has also been introduced, while not changing their contents.

Tables by industry still have a central role to play in the presentation of national accounts estimates. The industry tables are now grouped according to the new Norwegian activity classification (SN94), which is based on the new EU-standard NACE Rev.1. Basically, change to this nomenclature was carried out before the new

standard was adopted in the basic statistics, and was based on methods that also utilized the new product classification CPA. This nomenclature work of the main revision was quite time-consuming, for the manufacturing industries in particular. Activities (industries) were also cross-classified according to categories of market and non-market activities, i.e. market production, production for own final use, other non-market production in central government, in local government and in non-profit institutions serving households (NPISH). The latter category was introduced in the Norwegian national accounts for the first time.

Supply and use tables, which traditionally have played a central role in the Norwegian national accounts, have been given increased importance internationally in both SNA 1993 and ESA 1995. It was therefore a basic principle throughout the main revision work that supply and use tables ("statistical input-output tables") should play the same fundamental role for the compilation of main national accounts aggregates as before. An element of modernization was achieved from increasing the number of services and service activities relatively to goods and goods-producing activities in the new classifications by products and industries.

Looking at new concepts, a more articulated description of the consumption activities has been a major achievement in the new system, primarily because they now distinguish between expenditures and acquisitions (the former to describe expenditures incurred on consumption goods and services by the sectors, the latter to describe consumption goods and services actually acquired by households and by government). For households, two main concepts of consumption are now available, i.e. household final consumption expenditure and actual final consumption of households. Private final consumption expenditure in the former Norwegian system was defined in between the two new concepts (since it included government-financed consumption through the transfers of social benefits to households, inter alia to health purposes). Actual final consumption of households is defined to include household final consumption expenditure, final consumption expenditure of NPISHs and individual consumption expenditure of central and local government. Actual final consumption of government is defined to include the remaining part of government final consumption expenditure, i.e. collective consumption expenditure.

For gross capital formation, major changes of principles have been introduced as well (inter alia, including a considerable part of military expenditures, computer software, mineral and petroleum exploration, etc.). A new main category of gross capital formation - acquisitions less disposals of valuables - has so far not played any role in practical compilation, however.

The implementation of the new international system was a good occasion for reviewing the Norwegian terminology, for both the new and existing terms in national accounts. The main terms were kept mostly unchanged, e.g. the Norwegian terms for gross domestic product, gross national income, value added, disposable income, compensation of employees, net lending, saving and social benefits. Some important terms were given a new name, cf. household final consumption expenditure ("konsum i husholdninger") instead of private final consumption expenditure ("privat konsum") and adding the new concept of actual final consumption of households ("personlig konsum"). Other important terminological changes made in Norwegian include the concepts of taxes on income and wealth ("skatter på inntekt og formue mv.") instead of direct taxes ("direkte skatter"), and taxes on production ("produksjonsskatter") instead of indirect taxes ("indirekte skatter"), with changes for the sub-categories of the latter as well (and similarly for subsidies). Intermediate consumption has also been re-named in Norwegian (from "vareinnsats" to "produktinnsats").

The integration of institutional sector accounts with real economy national accounts data is based on a common data base with direct link to, inter alia, data bases of the government accounts. Gains to be achieved are more harmonized accounts and enables more detailed information to be published. New compilations for non-financial corporations and the household sector (activities of self-employed) based on accounting statistics have become more important. Furthermore, through the main revision work the estimates of balance of payments and national accounts proper have been closely coherent using common definitions and estimation methods in a complete integration. Government accounts also are closely harmonized with the new national accounting principles.

7. Further information

In addition to the tables published in NOS National Accounts, it is possible to order more detailed tables by applying directly to Statistics Norway. Tables can be transmitted by paper (post or telefax), electronic by diskettes or by e-mail (Ascii or Excel).

National accounts figures can be found on Internet at Statistics Norway's Web-pages. The Web-address is: <http://www.ssb.no/www-open/statemner/nasjonal/top.html>

If you want to order tables or need more information, please contact:

Activity classification of the national accounts

Activity in national accounts	Standard Industrial Classification (NACE Rev. 1)
**** AGRICULTURE, FORESTRY AND FISHING	
010 Agriculture	01.1+01.2+01.3
014 Agricultural and animal husbandry service activities, except veterinary activities	01.4
015 Hunting, trapping and game propagation including related service activities	01.5
020 Forestry, logging and related service activities	02
051 Fishing	05.01
052 Operation of fish hatcheries and fish farms	05.02
**** OIL AND GAS EXTRACTION, MINING AND QUARRYING	
100 Mining of coal and lignite; extraction of peat	10
111 Extraction of crude petroleum and natural gas	11.1
112 Service activities incidental to oil and gas extraction excluding surveying	11.2
130 Mining of metal ores	13
140 Other mining and quarrying	14
**** MANUFACTURING	
151 Production, processing and preserving of meat and meat products	15.1
152 Processing and preserving of fish and fish products	15.2
153 Processing and preserving of fruit and vegetables	15.3
154 Manufacture of vegetable and animal oils and fats	15.4
155 Manufacture of dairy products	15.5
156 Manufacture of grain mill products, starches and starch products	15.6
157 Manufacture of prepared animal feeds	15.7
158 Manufacture of other food products	15.8
159 Manufacture of beverages	15.9
160 Manufacture of tobacco products	16
170 Manufacture of textiles	17
180 Manufacture of wearing apparel; dressing and dyeing of fur	18
190 Tanning and dressing of leather; manufacture of luggage, handbags, saddlery, harness and footwear	19
201 Sawmilling and planing of wood, impregnation of wood	20.1
202 Manufacture of veneer sheets; manufacture of plywood, laminboard, particle board, fibre board and other panels and boards	20.2
203 Manufacture of builders' carpentry and joinery	20.3
204 Manufacture of wooden containers and other products of wood	20.4+20.5
211 Manufacture of pulp	21.11
212 Manufacture of paper and paperboard	21.12
213 Manufacture of articles of paper and paperboard	21.2
221 Publishing	22.1
222 Printing and service activities related to printing	22.2
223 Reproduction of recorded media	22.3
231 Manufacture of coke oven products	23.1
232 Manufacture of refined petroleum products	23.2
241 Manufacture of basic chemicals, excl. fertilizers and nitrogen compounds, plastics in primary forms and synthetic rubber	24.11+24.12+24.13+24.14
242 Manufacture of fertilizers and nitrogen compounds, pesticides and other agro-chemical products	24.15+24.2

Activity in national accounts (cont.)**Standard Industrial Classification
(NACE Rev. 1)**

243	Manufacture of paints, varnishes and similar coatings, printing ink and mastics	24.3
244	Manufacture of pharmaceuticals, medicinal chemicals and botanical products	24.4
245	Manufacture of soap and detergents, cleaning and polishing preparations, perfumes and toilet preparations	24.5
246	Manufacture of other chemical products	24.6
247	Manufacture of plastics and synthetic rubber in primary forms and man-made fibres	24.16+24.17+24.7
250	Manufacture of rubber and plastic products	25
261	Manufacture of glass and glass products	26.1
262	Manufacture of ceramic products, bricks, tiles etc.	26.2+26.3+26.4
265	Manufacture of cement, lime and plaster	26.5
266	Manufacture of articles of concrete, cement and plaster, non-metallic mineral products	26.6+26.7+26.8
271	Manufacture of iron, steel and ferro-alloys	27.1+27.2+27.3
273	Aluminium production	27.42
274	Manufacture of other non-ferrous metals	27.41+27.43+27.44+27.45
275	Casting of metals	27.5
281	Manufacture of structural metal products, tanks, reservoirs, steam generators	28.1+28.2+28.3
286	Manufacture of cutlery, tools and general hardware	28.6
287	Manufacture of other fabricated metal products etc.	28.4+28.5+28.7
291	Manufacture of machinery of mechanical power and other general purpose machinery	29.1+29.2
293	Manufacture of machine-tools and special purpose machinery	29.3+29.4+29.5
296	Manufacture of weapons and ammunition	29.6
297	Manufacture of domestic appliances n.e.c.	29.7
300	Manufacture of office machinery and computers	30
311	Manufacture of electric motors, generators, transformers, and electricity distribution and control apparatus	31.1+31.2
313	Manufacture of insulated wire and cable	31.3
314	Manufacture of lighting equipment, electric lamps and other electric equipment	31.4+31.5+31.6
321	Manufacture of television and radio transmitters, communication equipment, electronic components etc.	32.1+32.2
323	Manufacture of television and radio receivers, sound or video recording or reproducing apparatus etc.	32.3
331	Manufacture of medical and precision instruments	33.1+33.2+33.3
334	Manufacture of optical instruments, watches and clocks	33.4+33.5
340	Manufacture of motor vehicles, trailers and semi-trailers	34
351	Building and repairing of ships, boats and pleasure and sporting boats	35.111+35.112 +35.113+35.116 +35.117+35.12
352	Building and repairing of oil-platforms and modules. Installation and completion work on platforms and modules	35.114+35.115
353	Manufacture of railway and tramway locomotives and rolling stock	35.2
354	Manufacture of aircraft and spacecraft	35.3
355	Manufacture of other transport equipment, incl. motorcycles and bicycles	35.4+35.5
361	Manufacture of furniture	36.1
362	Manufacture of jewellery and related articles	36.2
363	Manufacture of musical instruments, sports goods, games and toys etc.	36.3+36.4+36.5+36.6
371	Recycling of metal waste and scrap	37.1
372	Recycling of non-metal waste and scrap	37.2

Activity in national accounts (cont.)**Standard Industrial Classification
(NACE Rev. 1)******** ELECTRICITY, GAS AND WATER SUPPLY**

401	Production of electricity	40.101
402	Distribution of electricity, renting	Part of 40.102
403	Distribution of electricity, sales	Part of 40.102
404	Manufacture and distribution of gaseous fuels through mains	40.2
405	Steam and hot water supply	40.3
410	Collection, purification and distribution of water	41

****** CONSTRUCTION**

451	Site preparation	45.1
452	General construction of buildings etc.	45.211+45.22
453	Construction of civil engineering works	45.212+45.23+45.24+45.25
454	Building installation and completion	45.3+45.4
455	Renting of construction or demolition equipment with operator	45.5

****** DOMESTIC TRADE, REPAIR OF GOODS**

501	Sale of motor vehicles, incl. parts and accessories	50.1+50.3+50.401+50.402
502	Maintenance and repair of motor vehicles and motorcycles	50.2+50.403
505	Retail sale of automotive fuel	50.5
510	Wholesale trade and commission trade	51
521	Retail trade	52.1+52.2+52.3 +52.4+52.5+52.6
527	Repair of personal and household goods	52.7
551	Hotels and other accommodation	55.1+55.2
553	Restaurants, canteens and catering	55.3+55.4+55.5

****** TRANSPORT AND COMMUNICATION**

601	Transport via railways	60.1
602	Scheduled motor bus transport	60.211
603	Taxi operation	60.22
604	Other land transport	60.23+60.24
605	Tramway and suburban transport	60.212
608	Transport via pipelines	60.3
611	Ocean transport and coastal water transport abroad	61.101+61.102
613	Inland water transport	61.103+61.104 +61.105+61.106 +61.109+61.2
620	Air transport	62
631	Supporting activities of cargo handling and storage, other supporting land and air transport activities	63.111+63.113 +63.12+63.21 +63.23+63.401+63.403+63.409
632	Other supporting water transport activities	63.112+63.22+63.402
633	Activities of travel agencies etc.	63.3
641	Post and courier activities	64.1
642	Telecommunications	64.2

****** FINANCIAL INTERMEDIATION**

651	Central banking	65.11
652	Other monetary intermediation	65.12
654	Monetary intermediation indirectly measured	
655	Other financial intermediation	65.2
659	Financial intermediation indirectly measured	
661	Life insurance	66.01
662	Pension funding	66.02
663	Non-life insurance	66.03
669	Adjustment item, insurance	
670	Activities auxiliary to financial intermediation	67

Activity in national accounts (cont.)	Standard Industrial Classification (NACE Rev. 1)
**** REAL ESTATE, BUSINESS ACTIVITIES	
700 Real estate activities	70.1+70.202+70.3
704 Dwelling service production, for own final use	70.201+ estimated output of owner-occupiers
711 Renting of transport equipment	71.1+71.2
713 Renting of machinery and equipment and household goods etc.	71.3+71.4
720 Computer and related activities	72
730 Research and development	73
741 Legal, accounting, book-keeping and auditing activities; tax consultancy; market research and public opinion polling; business and management consultancy; holdings	74.1
742 Architectural and engineering activities and related technical consultancy	74.2+74.3
744 Advertising	74.4
745 Labour recruitment and provision of personell; investigation and security activities	74.5+74.6
747 Industrial cleaning	74.7
748 Miscellaneous business activities n.e.c.	74.8
**** PUBLIC ADMINISTRATION AND DEFENCE, COMPULSORY SOCIAL SECURITY	
751 Public administration and compulsory social security activities	75.1+75.21+75.23 +75.24+75.25+75.3
752 Defence activities	75.22
**** EDUCATION	
800 Education	80
**** HEALTH AND SOCIAL WORK	
851 Human health activities	85.1
852 Veterinary activities	85.2
853 Social work activities	85.3 - part of 85.329
854 Combined nursing activities	Part of 85.1 and part of 85.3 (for local government)
859 Social work activities by disabled workers	Part of 85.329
**** OTHER COMMUNITY AND PERSONAL SERVICES	
900 Sewage and refuse disposal, sanitation and similar activities	90
910 Activities of membership organizations	91
921 Motion picture and other entertainment, new agency and cultural activities	92.1+92.3+92.4+92.5
922 Radio and television activities	92.2
926 Sporting activities and other recreational activities	92.6+92.72
927 Gambling and betting activities	92.71
930 Other service activities	93
**** DOMESTIC SERVICES	
950 Private households with employed persons	95

Classification by kind of main activity in the tables

Kind of main activity in the tables	Standard Industrial Classification (NACE Rev. 1)
Agriculture, hunting and rel. service act.	01
Forestry and logging	02
Fishing, fish hatcheries and fish farms	B
Oil and gas extraction	11
Mining and quarrying	10+13+14
Manufacturing	D
Electricity, gas and water supply	E
Construction	F
Wholesale and retail trade	50+51+52-50.2-50.403-52.7
Repair of motor vehicles and goods	50.2+50.403+52.7
Hotels and restaurants	H
Ocean transport	61.101+61.102
Transport via pipelines	60.3
Other transport activities	60+61+62+63-60.3-61.101-61.102
Post and telecommunications	64
Financial intermediation, insurance	J
Real estate activities	70
Renting and business activities	71+72+73+74
Public administration and defence	L
Education	M
Health and social work	N
Services n.e.c.	O+P

Appendix C

Classification by detailed kind of activity in the tables

Detailed kind of activity in the tables	Industry in national accounts (see appendix A)
MARKET PRODUCERS	
Agriculture and hunting	010+014+015
Forestry and logging	020
Fishing	051
Fish farming	052
Oil and gas extraction, proper	111
Services to oil and gas extraction	112
Coal mining and peat extraction	100
Mining of metal ores	130
Other mining and quarrying	140
Food products	151+152+153+154+155+156+157+158
Beverages and tobacco	159+160
Textile products	170
Wearing apparel	180
Footwear and leather products	190
Wood and wood products	201+202+203+204
Pulp, paper and paper products	211+212+213
Publishing, printing, reproduction	221+222+223
Refined petroleum products	231+232
Chemicals and chemical products	241+242+243+244+245+246+247
Rubber and plastic products	250
Other non-metallic mineral products	261+262+265+266
Basic metals	271+273+274+275
Fabricated metal products	281+286+287
Machinery and equipment n.e.c.	291+293+296+297
Office machinery and computers	300
Electrical machinery and apparatus	311+313+314
Radio, TV sets, communication equip.	321+323
Instruments, watches and clocks	331+334
Motor vehicles, trailers, semi-trailers	340
Transport equipment n.e.c.	353+354+355
Furniture, manufacturing n.e.c.	361+362+363
Recycling	371+372
Oil platforms, ships and boats	351+352
Electricity, gas and steam supply	401+402+403+404+405
Construction	451+452+453+454+455
Wholesale and retail trade	501+505+510+521
Repair of motor vehicles and goods	502+527
Hotels and restaurants	551+553
Ocean transport	611
Transport via pipelines	608
Land transport	601+602+603+604+605
Inland water transport	613
Air transport	620
Supporting transport activities	631+632+633
Post and telecommunications	641+642
Financial intermediation	651+652+655
Insurance and pension funding	661+662+663
Auxiliary financial intermediation	670
Real estate activities	700
Renting of machinery and equipment	711+713

Detailed kind of activity in the tables (cont.)	Industry in national accounts (see appendix A)
Computer and related activities	720
Research and development	730
Other business activities	741+742+744+745+747+748
Education	800
Health	851+852
Social work	853+859
Sewage, refuse disposal activities	900
Membership organizations n.e.c.	910
Cultural and sporting activities	921+922+926+927
Other service activities	930
OWN FINAL USE	
Agriculture, hunting and fishing	010+015+051
Construction	452
Dwelling services	704
Domestic services	950
NPISHs
