Production, Uses and Employment

Quarterly National Accounts 1978-1998

Norges offisielle statistikk

I denne serien publiseres hovedsakelig primærstatistikk, statistikk fra statistiske regnskapssystemer og resultater fra spesielle tellinger og undersøkelser. Serien har først og fremst referanse- og dokumentasjons-formål. Presentasjonen skjer vesentlig i form av tabeller, figurer og nødvendig informasjon om datamaterialet, innsamlings- og bearbeidingsmetoder, samt begreper og definisjoner. I tillegg gis det en kort oversikt over hovedresultatene.

Serien omfatter også publikasjonene Statistisk månedshefte, Statistisk årbok, Historisk statistikk og Regionalstatistikk, samt Standarder for norsk statistikk og Veiviser i norsk statistikk.

Official Statistics of Norway

This series consists mainly of primary statistics, statistics from statistical accounting systems and results of special censuses and surveys, for reference and documentation purposes. Presentation is basically in the form of tables, figures and necessary information about data, collection and processing methods, and concepts and definitions. In addition, a short overview of the main results is given.

The series also includes the publications Monthly Bulletin of Statistics, Statistical Yearbook, Historical Statistics and Regional Statistics, as well as Standards for Norwegian Statistics and Guide to Norwegian Statistics.

Preface

This publication provides quarterly national accounts statistics for the years 1978-1998. The 1997 and 1998 figures are preliminary. The tables present GDP by final expenditure and value added by industry. Both unadjusted and seasonally adjusted figures are given. In addition, the publication provides quarterly figures on employment by industry from 1996. Annual national accounts statistics are published in National Accounts 1978-1996: Production, Uses and Employment and National Accounts 1990-1997: Production, Uses and Employment. The quarterly figures are harmonized with the annual national accounts.

The figures presented here are compiled according to the guidelines of the System of National Accounts 1993 and the European System of Accounts 1995. In 1995 Statistics Norway published the results from a main revision of the national accounts. The main revision has improved the quality of national accounts by using new methods of estimation and new statistical sources. New definitions have also been introduced. Definitions and classifications of the revised national accounts are reviewed in the text.

Principal figures for the years 1995-1997 have been published in the Weekly Bulletin of Statistics no. 19/98 and in Economic Analyses no. 4/98. In Economic Analyses no. 4/99 more details for the years 1997 and 1998 are published. Besides, principal figures from the national accounts can be found at Statistics Norway's home pages on Internet.

This publication is also available with text in Norwegian: Kvartalsvis nasjonalregnskap 1978-1998: Produksjon, anvendelse og sysselsetting.

More detailed figures than presented in this publication can be supplied on request. Please see chapter 8 for further information.

Head of Division for National Accounts is Liv Hobbelstad Simpson. The publication is prepared by executive officer Pia E. Tønjum.

1. Introduction

The national accounts statistics are designed to provide a consistent and comprehensive survey of the national economy. The national accounts contain national aggregates, and give detailed descriptions of transactions between different sectors of the economy, including the rest of the world. The national accounts also provide information on different types of capital stocks. Statistics from many areas are utilized in the national accounts. Some parts of the national accounts are constructed more or less directly from other statistics, while other parts are based heavily on calculations and estimations.

Statistics Norway completed in the middle of the nineties a main revision of the national accounts. More than 20 years have elapsed since the last main revision, while the earlier revisions were normally undertaken every 10 years or so. Consequently, it was necessary this time to conduct a very comprehensive examination of the sources and methods of the national accounts. In addition, new definitions and classifications are introduced based on new international guidelines of the System of National Accounts 1993 (SNA 1993, published by UN, OECD, IMF, the World Bank and the Commission of the European Communities in 1993) and the European System of Accounts 1995 (ESA 1995, published by Eurostat/EC-Commission in 1996). Norway has, according to the EEA-treaty, an obligation to implement ESA 1995.

The first results from the main revision were released by summer 1995. Statistics Norway has later on published revised annual time series back to 1978. The figures in this publication have been reconciled with the revised annual figures.

Definitions and classifications of the national accounts are reviewed below. This review is mainly related to the figures presented in this publication, i.e. production, uses and employment. Some of the figures have not been published, however, partly because no quarterly computations have been carried out, and partly because there are no available short-term statistics. Valuation principles are also briefly described. Further on are sources and methods of estimation utilized in the compilation the quarterly national accounts described. Methods of chain linking constant price figures, calculations on volume and price changes and harmonization with the annual accounts are also briefly explained. Finally some of the weaknesses of the compilations are described. Chapter 7 contains some figures in order to illustrate the economic development for the period 1978-1998.

2. Definitions

2.1. GDP and production

Gross domestic product (GDP)

- = Output – Intermediate consumption + Taxes on products, net – Correction for FISIM
- = Total value added + Taxes on products, net – Correction for FISIM
- = Final consumption expenditure + Gross fixed capital formation + Changes in inventories + Exports – Imports
- = Final uses – Imports
- = Final domestic uses + Exports – Imports
- = Compensation of employees + Operating surplus + Consumption of fixed capital + Taxes on production – Subsidies on production – Correction for FISIM

BNP is the Norwegian abbreviation for GDP (Gross Domestic Product). It refers to the sum of the gross values added of all units engaged in production, and consequently all income generated from production. GDP may be defined and compiled from three different main approaches (cf. the three definition blocks above), i.e. the production or output approach, the expenditure approach and the income approach. In the first block, the item "Correction for FISIM" (see below) might have been alternatively included with intermediate consumption and in the third block with gross operating surplus. However, quarterly figures for the income components are not available.

Output

Value of the goods and services that are produced from resident production. This cover market production, production for own final use, and non-market production in general government and in non-profit institutions serving households.

The term has been amended from gross output as gross/net is not distinguished for this item.

Production of goods and services (products) should not be mistaken for sale or turnover of products. Correction items such as taxes on products and subsidies on products are not included with output, but are considered as additional items to total value added of the industries in order to arrive at GDP (at market prices).

Intermediate consumption

Value of the goods and services consumed (transformed or used up) as inputs by the production

process, excluding fixed assets whose consumption is recorded as consumption of fixed capital.

More precise definitions are available, in particular for drawing up the borderlines against gross fixed capital formation and against compensation of employees. Intermediate consumption relates to products consumed and not to products that are purchased.

Taxes on products

Compulsory, unrequited payments from units of production to general government as taxes payable per unit of goods and services when they are produced, delivered, sold, transferred or otherwise disposed of by their producers.

Subsidies on products

Current unrequited payments that government units make to units of production as subsidies payable per unit of goods and services which they produce, sell or import.

Taxes on products, net

= Taxes on products – Subsidies on products

FISIM

Value of financial intermediation services indirectly measured, i.e. for services which are not charged directly, defined as total property income receivable by financial intermediaries minus their total interest payable, excluding the value of property income receivable from the investment of own funds.

This part of output of financial intermediation (by banks and other financial institutions) is not allocated to various uses, but is unallocated and recorded as intermediate consumption (correction item to GDP), a convention which might be changed if international agreement is reached.

Value added

The additional value created or income generated by the process of production, recorded for an industry or the total of all resident industries, and defined as the value of output less the value of intermediate consumption.

Market production and production for own final use

Production carried out by producers whose output is all or mostly all marketed, respectively retained for their own final use.

The definitions of market and non-market production are based on certain criteria. Production for own final use by industry includes agriculture and hunting, fishing, general construction of buildings, building installation and completion, dwelling

services (owner-occupiers etc.), and private households with employed persons. In addition, products involved in market production might also be designated as products for own final use (e.g. agricultural products, firewood, fish etc.).

Total supply

= Output + Taxes on products, net + Imports
 = Output at basic prices + Taxes on products
 – Subsidies on products + Imports

Taxes on products (and subsidies on products) include taxes (and subsidies) on products that are related to both domestic production and imports (including customs duties). Imports of individual goods are valued at cif. In the institutional sector accounts, output is recorded at producers' prices (i.e. including taxes on products, net).

2.2. Final use categories

Final uses

= Final consumption expenditure + Gross fixed capital formation + Changes in inventories + Exports

Final consumption expenditure

= Household final consumption expenditure + Final consumption expenditure of NPISHs + Central government final consumption expenditure + Local government final consumption expenditure
 = Actual final consumption of households + Actual final consumption of general government

The first relationship defines total final consumption expenditure of the sectors. The second relationship sums up total consumption of goods and services acquired by the sectors, i.e. by the value of all the individual consumption of goods and services acquired by resident households irrespective of which sector is financing them, and by the value of the collective consumption services provided by general government to the community or large sections of the community.

Government final consumption expenditure

= Central government final consumption expenditure + Local government final consumption expenditure
 = Individual consumption of general government + Collective (actual final) consumption of general government

Collective consumption of general government

Government final consumption expenditure (such as general public services, defence affairs, public order

and safety affairs, industry-related economic affairs and services) that do not provide a mechanism for redistributing resources among individual households.

Collective consumption is the part of government consumption expenditure that is actually acquired by the general government, while the remaining government consumption expenditure (such as education, health, social security and welfare) are expenditures incurred by general government as well, but actually acquired by households.

Consumption of goods

Household consumption expenditure that relates to households' consumption of goods.

Household consumption expenditure of goods should not be mixed up with actual consumption of goods acquired by households (not specified in tables). The difference is equal to individual consumption of goods in consumption expenditure of general government and NPISHs (minor importance since most individual consumption expenditure of these sectors relates to services).

Consumption of services

Household consumption expenditure that relates to households' consumption of services.

Household consumption expenditure of services should not be mixed up with household actual consumption of services, which has a far wider content (see above).

Household final consumption expenditure

Expenditure incurred by resident households on consumption goods and services.

Household durables and semi-durables - except expenditure on dwellings and valuables - are recorded as household consumption expenditure in the period they are acquired (purchased). Expenditure on dwellings by households constitutes gross fixed capital formation, while dwelling services (rentals) are recorded annually over the period of service lives of the dwellings as part of the household consumption expenditure.

Final consumption expenditure of NPISHs

Expenditure incurred by non-profit institutions serving households on consumption goods and services. These expenditures add up from intermediate consumption (goods and services which NPISHs need for their production of education, health, cultural and other services), compensation of employees, consumption of fixed capital, any taxes on production, while deducting receipts from sales.

Final consumption expenditure of NPISHs is treated as actual final consumption of households, i.e. total value of final consumption expenditure of NPISHs is allocated as acquired by households.

Local government final consumption expenditure

Expenditure incurred by local government on consumption goods and services. These expenditures add up - as before - from intermediate consumption (goods and services which local government needs for its production), compensation of employees in local government, consumption of fixed capital in local government, any corresponding taxes on production, net, while deducting receipts from sales from local government to other sectors. In addition, local government final consumption expenditure includes consumption goods and services that local government has purchased (i.e. expenditure incurred) from market producers and supplied directly to households.

Local government final consumption expenditure consists of two main parts, i.e. collective (actual) final consumption of local government and individual consumption expenditure of local government which is also part of actual final consumption of households.

Central government final consumption expenditure

Expenditure incurred by central government on consumption goods and services. These expenditures add up - as before - from intermediate consumption (goods and services which central government needs for its production), compensation of employees in central government, consumption of fixed capital in central government, any corresponding taxes on production, net, while deducting receipts from sales from central government to other sectors. In addition, central government final consumption expenditure includes consumption goods and services that central government has purchased (i.e. expenditure incurred) from market producers and supplied directly to households.

Central government final consumption expenditure consists of two main parts, i.e. collective (actual) final consumption of central government and individual consumption expenditure of central government which is also part of actual final consumption of households.

Actual final consumption of households (= Actual individual consumption)

= Household final consumption expenditure +
Final consumption expenditure of NPISHs +
Individual consumption expenditure of
central government + Individual

consumption expenditure of local government

Individual consumption expenditure is exclusively - related to households (i.e. only sector to acquire individualized consumption goods and services).

Gross capital formation

= Gross fixed capital formation + Changes in inventories + Net acquisitions of valuables

Net acquisitions of valuables entail an extended content of gross capital formation, but so far with poor empirical coverage for this new item. Gross capital formation as a term diverges from the similar term gross real investment (see below) which is used to distinguish investment in non-financial assets from investment in financial assets (cf. net lending/net borrowing).

Gross real investments

Gross capital formation (including addition for the value of non-produced non-financial assets).

Gross fixed capital formation

Value of acquisitions less disposals of new or existing fixed assets. Fixed assets consist of both tangible fixed assets (dwellings, other buildings and structures, machinery and equipment, cultivated assets) and intangible fixed assets (mineral exploration, computer software and other intangible fixed assets).

Apart from extended coverage for intangible fixed assets and new valuation principle for large items (see below), the definition is more or less as before the revision. The borderline against intermediate consumption is drawn by value magnitude and not by duration as before.

Changes in inventories

Value of the entries into inventories less the value of withdrawals and the value of any recurrent losses of goods held in inventories. Goods (and services that may take a long time to produce, such as software development) are relevant for changes in inventories, also including work-in-progress, as well as work-in-progress on cultivated assets (single-use plants or livestock - also including young fish - for later slaughtering).

Net acquisitions are partly actual purchases and sales of goods, but also reflect internal transactions of the producers. In practice, changes in inventories of goods in general are determined as total supply less total other uses of each good and subsequently summed over all goods.

Exports of goods and services

Value of goods and services from residents to non-residents.

Imports of goods and services

Value of goods and services from non-residents to residents.

Export surplus

= Exports - Imports

Total uses

= Intermediate consumption + Final consumption expenditure + Gross fixed capital formation + Changes in inventories + Exports
 = Final uses + Intermediate consumption
 = Domestic uses + Exports
 = Final domestic uses + Exports + Intermediate consumption

2.3. Income components

Compensation of employees

= Wages and salaries + Employers' social contributions

Wages and salaries

Remuneration to employees as entitled to receive from employers in respect of work done during the relevant period (before adding employers' social contributions).

Wages and salaries are both in cash and in kind. Wages and salaries in cash include pay for overtime, and sickness and maternity allowances paid by employers. Wages and salaries in kind consist of goods and services, or other benefits, provided free or at reduced prices by employers, that can be used by employees at their own discretion. Wages and salaries subsequently are distributed to households and to rest-of-the-world (i.e. for non-residents employed with resident producers, cf. foreigners on Norwegian ships and employees not fulfilling the one-year criterion to their centre of economic interest).

Employers' social contributions

Value of social contributions incurred by employers in order to obtain social benefits for their employees, paid to central government and to autonomous social security and pension funds as well as non-autonomous pension funds. They include the following sub-items: employers' contributions to National Insurance, employers' other actual social contributions (contributions to the Public Service Pension Fund, Municipal Pension Funds, other social security schemes, employers' contributions to employees with low wages and salaries, and other

social contributions), and in addition, employers' imputed social contributions (which coincide with social benefits actually paid - i.e. through unfunded arrangements - from employers to present or former employees).

Other taxes on production

Taxes - except taxes on products - that resident producers incur, and that are payable to general government, as a result of engaging in production.

The contents of other taxes on production are not much amended as a result of definitional changes due to the revision.

Other subsidies on production

Subsidies - except subsidies on products - that resident producers may receive from general government, as a consequence of engaging in production.

The contents of other subsidies on production are reduced considerably as a result of definitional changes due to the revision.

Taxes on production

= Taxes on products + Other taxes on production

Subsidies on production

= Subsidies on products + Other subsidies on production

Operating surplus

= Gross domestic product - Compensation of employees - Taxes on production + Subsidies on production - Consumption of fixed capital

Operating surplus may also be estimated directly by using the income approach (see GDP above). Earlier, there was no distinction between operating surplus and mixed income in the household sector.

Operating surplus by activity

= Value added - Compensation of employees - Other taxes on production + Other subsidies on production - Consumption of fixed capital

For the time being, quarterly figures on the income components are not available.

2.4. Fixed assets and consumption of fixed capital

Fixed assets

Consist of both tangible fixed assets (dwellings, other buildings and structures, machinery and equipment, cultivated assets etc.) and intangible fixed assets

(mineral exploration, computer software and other intangible fixed assets).

Inventories and valuables that are not used repeatedly in production, are not counted as fixed assets. Neither do natural assets that are not produced.

Consumption of fixed capital

Decline in the current value of the stock of fixed assets as a result of physical deterioration, normal obsolescence or normal accidental damage.

2.5. Employment

Employed persons

Average number of persons employed with resident producers. Persons employed part-time and persons temporary on leave are included.

Foreign employees engaged in domestic production, of which foreign seamen on Norwegian owned ships or ships rented from abroad are included. Numbers employed are distributed by activities, gender and employees vs. self-employed.

Full-time equivalent persons

Defined as number of persons full-time employed, plus number of persons part-time employed recalculated to full-time equivalent basis.

Numbers of full-time equivalent employees are arrived at by recalculating to full-time equivalent basis by using share of full posts or of wages as weights. Numbers of full-time equivalent self-employed are arrived at on the basis of working time of self-employed males.

Total hours worked

Hours worked in domestic production within effective and normal working hours with addition for overtime while deducting absences due to sickness, leave of absence, vacations and any labour conflicts.

Hours worked are also influenced by the calendar effect (movable holidays and leap years). For self-employed, hours worked are determined as actual working hours adjusted for absence.

Quarterly figures on employed persons, the total number of persons employed and employees by activity, were released for the first time in 1997. For the time being, only the number of persons employed by activity have been released. However, Statistics Norway is planning to publish more tables when timeseries with improved quality are available.

3. Classifications of the national accounts

3.1. Accounting system of the national accounts

The accounting system of the national accounts contains a listing of the specifications of accounts used. The new accounting system for the revised Norwegian national accounts, is based on the international standards for national accounts SNA 1993 and ESA 1995. The accounting system gives the framework and contents for the production of national accounts statistics. In addition to accounting structure, the accounting system contains a number of groupings or classifications used in the national accounts. The most important of these are described below.

3.2. Institutional sector classification

The institutional sector classification lists the main sectors of the economy, i.e. non-financial corporations, financial corporations, general government, households and rest-of-the world, with the corresponding sub-sectors. This classification is particularly important for the production and publication of national accounts statistics and balance of payments statistics, while also playing a central role for credit market statistics and financial balance sheets. For more information about the institutional sector classification, see National Accounts 1990-1997: Institutional Sector Accounts (NOS C 485).

3.3. Activity classification of the national accounts

The activity classification used in the national accounts refers to aggregates that are based on the new Norwegian Standard Industrial Classification (SN94), which is an elaboration of the EU-standard NACE Rev.1. The detailed activity classification of the revised national accounts contains 148 industries (see appendix A), while the quarterly national accounts have much fewer industries specified. Several levels of aggregation have been introduced for publication and reporting purposes. The activity classifications used in this publication are presented in appendix B-D.

3.4. Transactions in goods and services

This is a listing of variables for which transactions of the national accounts are grouped in terms of products. The main categories are output, intermediate consumption, final consumption expenditure (and actual final consumption), gross capital formation, exports and imports. Output is distributed on market and non-market output, plus output for own final use. Non-market output has sub-categories for central government, local government

and the NPISHs. The former two sub-categories define the production of general government, when also some market output in local government (water supply, sewage and refuse disposal) are added. Important consumption categories are individual consumption expenditure, collective consumption expenditure and actual final consumption - concepts which are defined above. Gross capital formation consists of former categories of gross fixed capital formation and changes in inventories, plus a new category of acquisitions less disposals of valuables. A main breakdown of exports and imports follows the distinction between goods and services.

3.5. Distributive transactions

This is a listing of variables for which transactions of national accounts is relevant for the various income accounts. The main categories are wages and salaries, employers' social contributions, taxes on production, subsidies, property income, current taxes on income, wealth etc., social benefits, other current transfers and capital transfers. Components of compensation of employees (see definitions above) and taxes on production and subsidies (with components for taxes on products and other taxes on production, respectively subsidies on products and other subsidies on production) are relevant for this publication, while the other categories of distributive transactions will be mostly exposed in the publication on institutional sector accounts.

3.6. Classification of balancing items in the national accounts

This is a listing of main aggregates which are arrived at as balancing items in the national accounts and balance of payments, such as GDP, GNI, disposable income, saving, net lending/net borrowing, export surplus and external balance of current account. These are main aggregates that are among the most important concepts used in the production and presentation of national accounts and balance of payments statistics.

3.7. Classification of non-financial assets

This is a classification by type for aggregates of non-financial assets, such as tangible and intangible fixed assets, inventories, valuables, and non-produced assets, both including tangible assets such as land, subsoil assets, water resources etc. and intangible assets such as patented entities, transferable contracts etc. It classifies the various types of non-financial assets according to the structure of these main items. This classification is more aggregated than the corresponding classification used for gross capital formation by type.

3.8. Product classification of the national accounts

Product classification of the national accounts relates to aggregates of goods and services that are specified in the national accounts (see transactions in goods and services above which define those variables for which the product classification applies). The classification is based on EU's central product classification CPA - Statistical Classification of Products by Activity in the European Community (Eurostat, 21.10.1992). CPA is a grouping of products by activities, i.e. it defines characteristic products within each activity and which are thus connected to the activity classification NACE Rev.1. Excluding the products introduced for mere technical accounting reasons, the new product classification of the national accounts contains 680 aggregated goods (of which 565 are manufacturing goods) and 300 aggregated services. In the quarterly national accounts the number of products are much less.

3.9. Classification of individual consumption by purpose

This is the classification of consumption used in the national accounts for household final consumption expenditure and household actual final consumption. For publication, this classification and the more aggregated versions appear in the same hierarchal system, with groupings of 10, 35 and 112 items of consumption purposes. This new classification of individual consumption by purpose is based on the one presented in SNA 1993 and ESA 1995 (COICOP - Classification Of Individual Consumption by Purpose). COICOP are however slightly revised in 1997.

3.10. Classification of the functions of the government

This is a classification by purpose which is applied to all types of expenses of general government, such as government final consumption expenditure, gross fixed capital formation, subsidies, property income (i.e. expenses), capital transfers and other transfers, for use in financial accounts of government and in the national accounts. This classification is based on the version of COFOG (Classification Of Functions Of the Government) which was presented in SNA 1993 and ESA 1995, but has appeared in a somewhat revised version in 1997. In the national accounts, 55 COFOG-groups are specified, of which 51 groups distribute central government final consumption expenditure and 25 groups distribute local government final consumption expenditure.

3.11. Classification of the purposes of the non-profit institutions serving households

This is a minor purpose classification which applies to the expenses of the NPISHs. It is based on the

international classification referred to in SNA 1993 as COPNI (Classification Of the Purposes of the Non-profit Institutions serving households). The revised national accounts specify 5 such groups of purposes.

3.12. Classification of outlays of producers by purpose

This is a purpose classification not yet developed in the Norwegian statistical system. It will have an international basis in COPP (Classification of Outlays of Producers by Purposes) - also presented in SNA 1993 - and is an alternative classification of the outlays of producers by purpose, such as sales promotion, research and development, pollution abatement and control, employee training etc.

4. Valuation

Valuation is particularly relevant for transactions in goods and services, but also to the general aspect of time of recording (cf. cash values or accruals values, and other principles in recording of statistical data). The transactions of variables to appear in this publication (the national accounts of the real economy) apply in general the accruals basis principle of recording. Thus, taxes on production and subsidies are basically recorded in accruals values and not as recorded in the government accounts (taxes on production and subsidies in cash values).

Transactions in goods and services have different price references for their recording. Output is valued at basic prices in the cases of market production and production for own final use (i.e. basic prices for similar products in market production), while non-market output (per convention) is recorded by total costs of production in lack of prices. The use categories - both intermediate consumption and final uses - are valued at purchasers' prices, including exports at fob. Imports are valued at cif. Basic prices mean that corresponding taxes on products are deducted and subsidies on products added to output recorded at producers' prices (excluding value added tax). Previously, the estimates of output were published at producers' prices (excluding VAT). However, the principle of output at basic prices has been introduced in SNA 1993 og ESA 1995 for the purpose of achieving a standard common valuation internationally and at national level.

Output at basic prices has implications such as:

- value added of an industry is "valued" at basic prices (calculated as output at basic prices less intermediate consumption at purchasers' prices)
- taxes on products (including value added tax and investment levy) and subsidies on products are not distributed by industry

- total value added of the industries also is "valued" at basic prices
- GDP is "valued" at market prices, which means that taxes on products less subsidies on products are added to total value added of the industries at basic prices
- accruals VAT (i.e. VAT on output less non-deductible VAT on intermediate consumption and other uses) is among the taxes on products to be added to arrive at GDP
- taxes and subsidies on production that are not recorded as taxes and subsidies on products (i.e. other taxes on production, other subsidies on production) are distributed by industry and thus influence the magnitudes of operating surplus of the industries (but not value added of the industries).

5. The compilation of the quarterly accounts

5.1. Sources and methods of estimation

Compilation of the quarterly national accounts implies the use of comprehensive input data sets, more than 1700 series in all. The compilation is mainly based on the short-term statistics from Statistics Norway, such as price indices, the index of production, the quarterly investment survey, the index of retail sales, the foreign trade statistics and so forth. In addition, we use some short-term information from other sources. The data are arranged in a way that corresponds with the classification of commodities, industries and use categories in the quarterly accounts. Based on the development of these short-term indicators and current-price figures from the base year (which is t-2), the national accounts figures for the current quarter are computed. For more details (in Norwegian) on sources and methods of estimation, see Steinar Todsén (1999).

If an indicator does not cover the whole of the period from the base year to current quarter, we use a simple projection method, based on the development in the previous periods.

However, for some variables information on short-term development is lacking. Figures for these variables are computed through breakdown of annual estimates into quarters. Some of the production in agriculture is computed in this way, for instance. Until 1986 government expenditure on goods and services (at constant prices) were distributed equally on four quarters. However, since 1987 the quarterly figures have been based on quarterly or tertiary information.

The items in the national accounts that we neither have any short-term information on, nor computed breakdown of annual figures, are computed residually by balancing the accounts at current and constant prices. This balancing is carried out using an input-output model.

Which variables are computed by balancing depends on what kind of information that is available. For ordinary commodities change in stocks is residual. For services and goods that are not stocked, either a supply or a use component is computed residually. The accounting system contains, however, an important assumption of fixed ratios between gross output and intermediate consumption in most industries.

For some commodities, we have information on supply as well as on uses. In order to have sufficient degrees of freedom in balancing the accounts, we have introduced an adjustment factor when balancing the equations. The economic reason for this is in fact that it may be unreasonable for many commodities to apply average annual input-output coefficients to a quarter. There may occur some seasonal patterns that are not taken into account through this. Such an assumption applies, for instance, to the fixed ratio between gross value of production and intermediate consumption of electric power throughout the year. As we do not have any basis on how to distribute deviations on quarters, we have decided to keep the factor of adjustment as a separate item of the accounts.

The approach adopted to compile the quarterly national accounts is highly "mechanized". This concerns the updating of variables of the national accounts based on short-term statistics as well as the balancing of commodities, the computation of indirect taxes and factor incomes and the overall balancing of GDP and main aggregates. Apart from the data situation, this is maybe the main difference compared with the annual accounts, where much time is spent on evaluating the figures and distributing the residuals in a reasonable way. It is not possible to use this kind of manual operations in the compilation of the quarterly accounts.

However, by introducing the factors of adjustment, we do have the opportunity to utilize information which otherwise is not used. This opportunity has been desirable, partly because there may be some extraordinary occurrence in the economy that is missed by the indicators. The factors of adjustment are completely integrated in the compilation of figures both at constant as well as current prices.

The quarterly accounts are also used to compile the first two versions of the annual accounts. The

Economic Survey Accounts, published one month after the end of the year, are made by adding up the three quarters of the ordinary quarterly accounts and provisional estimates for the fourth quarter. The latter estimates are based on monthly data and other data available at that time. Three months later most of the indicator series are complete, and a revised version is published. There has also been a change of base year, from t-2 to t-1.

5.2. Employment and compensation of employees

Statistics Norway has since 1997 published employment figures as a part of the quarterly national accounts. The figures comprise employees and self-employed persons by industry, and employees by industry. Employees in market production are estimated from quarterly information in the register of employees and the Labour Force Surveys (LFS). The register based number of employees by industry are reconciled with the total number of employees from LFS by proportional adjustments. Employees in central and local government are, however, calculated by using quarterly estimates on compensation of employees and average wages and salaries in these industries. The number of self-employed is estimated from LFS. Statistics Norway is planning to publish total hours worked and compensation of employees by industry in the quarterly national accounts in the near future.

5.3. Chain linking of constant price figures

The base year of the Norwegian National Accounts is changed every year. Thus, basically no coherent and extensive timeseries for constant price figures are available. To obtain comparable constant price figures for several years, they are chained to a common reference year.

All the time series in the quarterly accounts are reconciled with annual figures at current and constant 1996-prices. Constant-price estimates in the national accounts are calculated at prices of the previous year, in other words, the base year is changed every year. In parallel, time series of volume figures are constructed by using prices from a reference year. This is done by multiplying the original figures with price indices showing the price level in the reference year in relation to the original base year. 1996 is chosen as the common reference year for the chained annual accounts figures. 1996 is the latest final accounts, and when we compute the figures of the quarterly accounts, 1996 is also the base year in the input-output model. Every year, when the new final accounts figures are available, the base year changes, and we recalculate all constant price timeseries as described here.

Starting with constant price figures with a common reference year, we can compute volume indices. This is done by dividing the figure for each quarter by the average of the quarters in the reference year of the index. Finally, the new series is multiplied by 100.

Using the volume indices, it is possible to compute constant figures with different reference years. This can be done in the following way: First, the volume index is given a new reference year (if necessary) by dividing it by the average of the new reference year. Then, the new index is multiplied by the current price figure of the reference year, divided by four. However, if this method is used on aggregated and disaggregated figures separately, we get the problem of non-additivity (see 5.4.).

5.4. Calculations on volume and price changes

Starting with time series that are chained to a common reference year, data on changes of volume may subsequently be constructed in terms of growth rates and corresponding implicit data on changes of prices. The constant-price estimates are consistent with the data on changes in volume in the series of growth rates. Since the chaining is carried out separately for all items, the table components do, however, not necessarily add to the totals of the same table. In other words, the sum of the detailed constant-price series will not equal the constant price aggregate (non-additivity). However, by chaining the constant-price figures separately at the aggregate and sectoral level, we obtain more accurate growth rates for the aggregates.

5.5. Harmonization with the annual accounts

The quarterly accounts, in particular the first quarter of each year, will be available in several versions. The previous quarters within a year will be revised each time current quarterly accounts are compiled, through the updating of the input-output model and furthermore through the harmonization with the annual accounts. When we have decided to revise the figures currently, one consideration has been to utilize all available information in order to have as accurate a picture of the economic development as possible for the analyses of the cyclical movements.

In addition to the Economic Survey Accounts, two other versions of the annual accounts are compiled. A preliminary set of accounts are published one year and three months after the end of the year, and the final accounts one year later. These two versions are compiled at a more detailed level and using other sources of information.

Due to these differences between the annual and quarterly accounts, the adding up of the first version of the quarterly accounts usually will differ from the

two annual versions. Because of this, the quarterly accounts are recalculated by distributing the annual figures on the quarters by using the original quarterly figures as keys. The recalculated quarterly accounts will then add up to the annual accounts at constant and current prices.

Even if the utilized indicators give a biased level for a variable, they may reflect changes as well. If the short-term movement of a series is reasonable, it will be desirable to carry out the reconciliation with the annual accounts in such a way that the original quarterly patterns are restored as much as possible. The reconciliation or harmonization follows the principle that the differences between the quarterly changes of the original and harmonized series shall be as small as possible. The quarterly accounts should add up to the figures of the annual accounts, and the value of the differences of the last quarter of the previous year already harmonized should be kept unchanged.

When recalculating the quarterly accounts after the main revision, this method of reconciliation was utilized. Without this requirement, the differences would be proportionally distributed on the quarters and the original quarterly patterns would be perfectly reproduced. However, a harmonization in that way could give a break in the homogeneity of a series at the turn of the year because each year will be proportionally adjusted by a given factor; the magnitude of the adjustments may be changed from one year to another. In order to get coherent series, it is necessary to impose continuity at the turn of the year. By the chosen method of harmonization, the differences may be distributed unequally throughout the year and through this the seasonal patterns could be changed. The changes in the seasonal patterns will be larger when the differences between the quarterly and annual accounts increase and smaller if no considerable differences occur.

All timeseries in this publication, were originally reconciled at constant 1993-prices (described above). When the latest annual accounts were available, annual figures at constant 1996-prices were proportionally distributed on the quarters by utilizing the same volume figures. Every year, when changing the base year in the input-output model, all timeseries are chained to a common reference year this way.

Nearly all series are harmonized independently of the other series, i.e. the final quarterly accounts available may not be harmonized within each quarter but only as an annual sum. The errors that occurs because of this are kept in the adjustment item on the supply side.

The figures at constant and current prices are mostly independently harmonized. As the differences from the annual accounts may be different in these series, the seasonal patterns of the series will as well be differently adjusted. This will have consequences for the development of the price indices of the harmonized accounts.

For more details (in Norwegian) on chaining and harmonization, see Pia E. Tønjum (Notater 99/19) and Steinar Todsén and Pia E. Tønjum (1999), where the technical procedures utilized in compiling the quarterly accounts are more thoroughly described.

5.6. Seasonally adjustment

The quarterly national accounts figures will often show short-term changes caused by the weather, holiday periods etc., which are defined as seasonal fluctuations. Other, more random, influences may also affect the quarterly series. For use in business cycle analysis it will often be useful to make adjustments for these factors. The purpose is to facilitate analysis of the changes from one quarter to the next. The Quarterly National Accounts series are adjusted using the software X-12 ARIMA from the US Bureau of the Census, which is also used in many other countries.

Described briefly, the seasonal adjustment is a decomposition of the original quarterly series (O) into three components: trend-cyclical (T), seasonal (S) and irregular (I). The decomposition model may be either multiplicative ($O=T*S*I$), or additive ($O=T+S+I$). In the Quarterly National Accounts, the multiplicative model is the default, but when a series contains at least one zero or negative value, the additive model has to be used.

The seasonal adjustment or decomposition is performed in X-12 ARIMA by calculating different types of moving averages.

Before the actual seasonal adjustment begins, the series are pre-adjusted for the placement of Easter, which varies between the first and second quarters. The next step is to produce a forecast of the series, based on an ARIMA model. The forecast is revised every quarter. This will often cause revisions in the last part of the series. The ARIMA models are re-estimated once a year.

A choice that has to be made during the seasonal adjustment process is whether the aggregates are to be adjusted directly or indirectly by summing up the adjusted detailed series. In the Quarterly National Accounts, the indirect method is used for most of the aggregates. This preserves the definitional relationships in the accounts. In addition, the

aggregates may consist of series with different seasonal patterns, which are best treated separately.

Another option is whether or not to impose time consistency on the adjusted series, i.e. that the sum of the adjusted figures is set equal to the sum of the unadjusted figures. This is a practical option from the users' point of view, but lowers the quality of the adjusted series. Previously, time consistency was imposed for practical reasons, but this is no longer the case.

Table 1 and 2 in this publication show seasonally adjusted quarterly volume figures with 1996 as reference year and percentage change in volume from one quarter to the next. The same tables also contain unadjusted annual figures. The discrepancy between the sum of the four quarters of the seasonally adjusted figures and the annual figures is partly caused by the adjustment process, as mentioned above. At the aggregate level there is also a chaining discrepancy, because the seasonally adjusted figures are calculated at detailed level and summed to the aggregates, while the unadjusted figures are chained directly at each level of aggregation (see also chapter 5.3 and 5.4).

5.7. Some weaknesses of the compilation

In using the quarterly accounts figures, one has to keep in mind some weaknesses. The data sources are poor in some areas. In particular, data sources on some service industries, and wholesale and retail trade are inaccurate. Areas with better statistical sources include manufacturing industries, private final consumption of goods and foreign trade.

One way of measuring the quality of the quarterly accounts is to compare the figures from the first two versions of the annual accounts (they are compiled by using more or less the same data sources as the quarterly accounts) with the final accounts. This is done in a study published (in Norwegian) in *Economic Analyses (Økonomiske analyser) no. 7/90* (Nils Øyvind Mæhle: *Kvaliteten på foreløpig nasjonalregnskapsstatistikk*) for the years 1972 to 1987. The article studies the growth rates of the main aggregates: GDP, private final consumption, investments, exports, imports and value added in manufacturing. The conclusion is that the preliminary figures contain relatively large errors, both systematic (they tend to show too small growth rates) and random. Still, the overall picture does not change too much from the preliminary to the final accounts. For the time being, the timeseries are too short to carry out a similar study after the main revision.

Another aspect of the quality of the quarterly accounts is the seasonal pattern. It is difficult to say

how good this is, because we do not have anything like the final accounts to compare the quarterly figures with. In addition, as mentioned above, the harmonization of the quarterly figures with the annual accounts leads to a change of the seasonal pattern of the series. This change may be different in various years depending on the magnitude of the errors. The development according to the harmonized series may be somewhat different from the originally computed series. An apparent change in the series may in fact be caused by technical factors referring to the computations.

Users of the quarterly national accounts have to be careful in drawing strong conclusions based on changes from one quarter to the next. On the other hand, the figures may be of important value in studying trends over several quarters and for aggregates of variables.

6. Revisions and publication of the national accounts

6.1. The current publication cycle

The national accounts for a specific time period are published in several versions. This is due to the availability of new or improved primary statistics, i.e. the index of production is replaced by the annual manufacturing statistics. Quarterly national accounts are published about 2 months after the end of the quarter. For each new quarter presented, the figures for the previous quarters within the same year are revised. The first version is published about 1 month after the end of the year and are based on accumulated quarterly accounts. The quarterly accounts are more aggregated compared to later annual accounts and comprise transactions in goods and services by industries and final use, in addition to employment data.

The next version of the annual accounts, also based on accumulated quarterly accounts, are published about 4 months after the end of the year. In this version provisional aggregated institutional sector accounts are included.

The revised annual accounts are based on more disaggregated calculations, and are compiled in two versions. The first preliminary version is published about 16 months after the end of the year, and later on, about 28 months after the end of the accounting year, the final version is published. The quarterly figures are harmonized with the final annual figures subsequently.

The national accounts are published in the Daily Bulletin of Statistics, Economic Analyses and in Official Statistics of Norway publications. National accounts data are also reported to international organisations, e.g. OECD, EUROSTAT, IMF and United Nations.

6.2. Main revisions

Main revisions are the occasions when special attention is given to the actual levels of the national accounts items, whilst best possible year-to-year movements have a first priority in the current national accounting work. In addition, main revisions normally will introduce new methods of estimation, based on new basic statistics, as well as new definitions and classifications, based on revised international guidelines. Thus, the quality of the quarterly national accounts have been improved by better utilization of data sources and methods of estimation. The results from the most recent main revision of the Norwegian national accounts were published in 1995.

Need for best possible estimated levels, means that main revisions in future should be carried out more frequently than before.

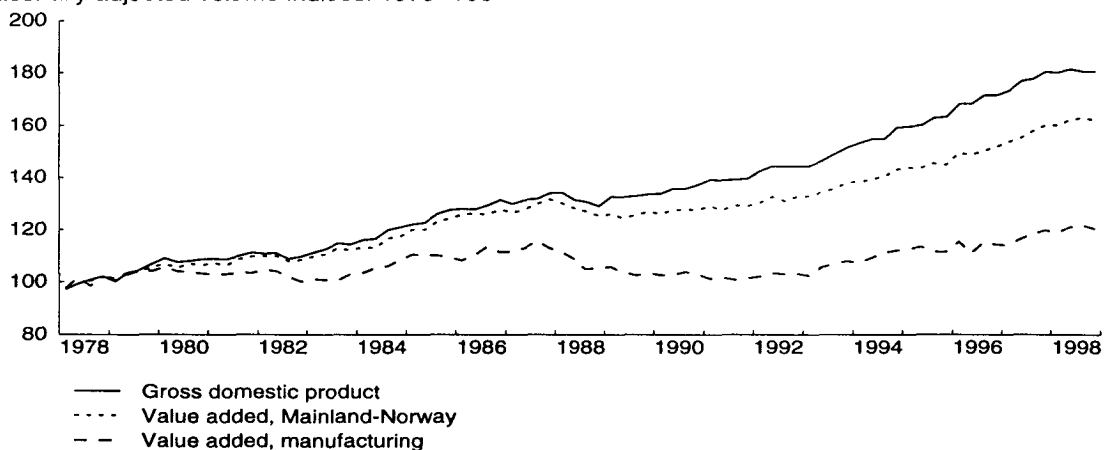

The main revision also had direct impact on the compilation of balance of payments statistics, presented in Norway as an integral part of the national accounts. Balance of payments statistics follow the IMF guidelines (Balance of Payments Manual, fifth edition, 1993), which are now harmonized with SNA 1993.

The 1995 revision has quite considerably amended earlier estimates. One important reason for this is that more than 20 years have elapsed since last main revision of the national accounts was undertaken in Norway. Earlier, main revisions were normally undertaken every 10 years or so. In recent years, the direct use of main aggregates such as GDP and GNI has become more important, in particular as a reference item, and often as a financing assessment base in international economic policy.

7. Economic development 1978 - 1998

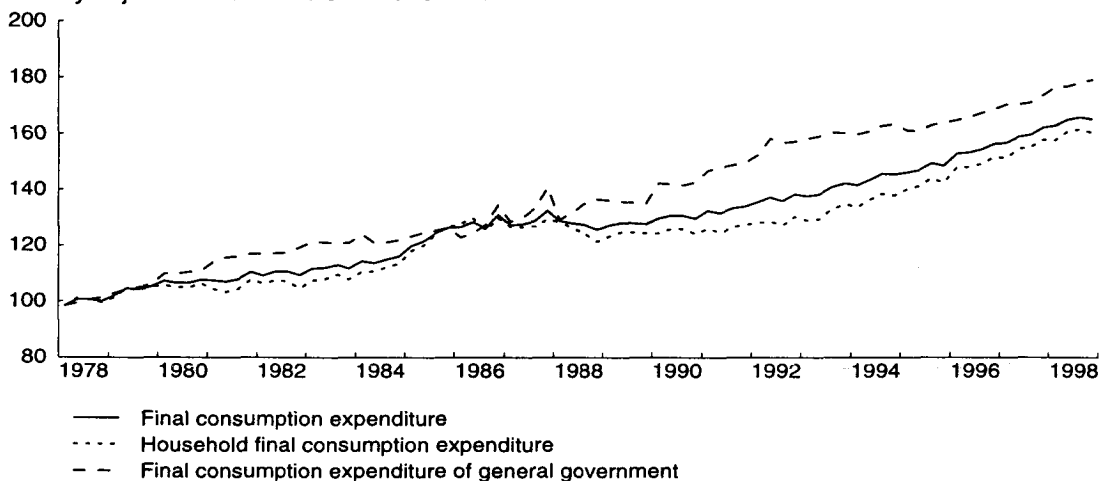

This chapter contains some figures in order to illustrate the economic development for the last 20 years. Statistics Norway has carried out a project describing the economic cycles in the Norwegian economy. For more details, please find the publications from this project (some of them in English) listed on page 114 (Previously issued on the subject).

8. Further information

Special tables

In addition to the tables published in NOS Quarterly National Accounts and NOS National Accounts, it is possible to order more detailed tables by applying directly to Statistics Norway.

Tables can be transmitted by paper (post or telefax), electronic by diskettes or by e-mail (Ascii or Excel).

Internet

Quarterly and annual national accounts figures can be found on Internet at Statistics Norway's Web-pages. The Web-addresses are:

<http://www.ssb.no/knr/> and
<http://www.ssb.no/nr/>

1 NPISH: Non-profit institutions serving households

2 Defined as total final consumption expenditure plus gross fixed capital formation in Mainland Norway

3 Defined as final consumption expenditure plus gross fixed capital formation

4 Gross domestic product is measured at market prices, while value added by industry is measured at basic prices

5 The discrepancies in the tables are partly caused by separate chaining at the sectoral and aggregate level.

In addition, the sum of a seasonally adjusted series over the four quarters of a year is not constrained to equal the corresponding annual figure

1 (cont.). Final expenditure and gross domestic product. At constant 1996-prices. Seasonally adjusted.
Million kroner⁵

1 NPISH: Non-profit institutions serving households

2 Defined as total final consumption expenditure plus gross fixed capital formation in Mainland Norway

3 Defined as final consumption expenditure plus gross fixed capital formation

4 Gross domestic product is measured at market prices, while value added by industry is measured at basic prices

5 The discrepancies in the tables are partly caused by separate chaining at the sectoral and aggregate level.

In addition, the sum of a seasonally adjusted series over the four quarters of a year is not constrained to equal the corresponding annual figure

1 (cont.). Final expenditure and gross domestic product. At constant 1996-prices. Seasonally adjusted.

1 NPISH: Non-profit institutions serving households

2 Defined as total final consumption expenditure plus gross fixed capital formation in Mainland Norway

3 Defined as final consumption expenditure plus gross fixed capital formation

4 Gross domestic product is measured at market prices, while value added by industry is measured at basic prices

5 The discrepancies in the tables are partly caused by separate chaining at the sectoral and aggregate level.

In addition, the sum of a seasonally adjusted series over the four quarters of a year is not constrained to equal the corresponding annual figure

1 (cont.). Final expenditure and gross domestic product. At constant 1996-prices. Seasonally adjusted.

1 NPISH: Non-profit institutions serving households

2 Defined as total final consumption expenditure plus gross fixed capital formation in Mainland Norway

3 Defined as final consumption expenditure plus gross fixed capital formation

4 Gross domestic product is measured at market prices, while value added by industry is measured at basic prices

5 The discrepancies in the tables are partly caused by separate chaining at the sectoral and aggregate level.

In addition, the sum of a seasonally adjusted series over the four quarters of a year is not constrained to equal the corresponding annual figure

1 (cont.). Final expenditure and gross domestic product. At constant 1996-prices. Seasonally adjusted.
Million kroner⁵

1 NPISH: Non-profit institutions serving households

2 Defined as total final consumption expenditure plus gross fixed capital formation in Mainland Norway

3 Defined as final consumption expenditure plus gross fixed capital formation

4 Gross domestic product is measured at market prices, while value added by industry is measured at basic prices

5 The discrepancies in the tables are partly caused by separate chaining at the sectoral and aggregate level.

In addition, the sum of a seasonally adjusted series over the four quarters of a year is not constrained to equal the corresponding annual figure

2. Final expenditure and gross domestic product. Seasonally adjusted.

1 NPISH: Non-profit institutions serving households

2 Defined as total final consumption expenditure plus gross fixed capital formation in Mainland Norway

3 Defined as final consumption expenditure plus gross fixed capital formation

4 Gross domestic product is measured at market prices, while value added by industry is measured at basic prices

5. Final expenditure and gross domestic product.

1 NPISH: Non-profit institutions serving households

2 Defined as total final consumption expenditure plus gross fixed capital formation in Mainland Norway

3 Defined as final consumption expenditure plus gross fixed capital formation

4 Gross domestic product is measured at market prices, while value added by industry is measured at basic prices

6. Final expenditure and gross domestic product.

Percentage change in prices from the same period in the previous year

Appendix A

Activity classification of the quarterly national accounts

MARKET PRODUCERS AND PRIVATE PRODUCERS FOR OWN FINAL USE

QNA- ACTIVITY	QNA- DESCRIPTION	NA- ACTIVITY
2301	Agriculture and hunting	22010, 22015, 23010, 23014
2302	Forestry and logging	23020
2305	Fishing	22051, 23051
2306	Fish farming	23052
2310	Mining and quarrying	23100, 23120, 23130, 23140
2311	Oil and gas extraction	23111
2312	Service act. incidental to oil and gas extr.	23112
2314	Fish and fish products	23152
2315	Meat and dairy products	23151, 23155
2316	Other food products	23153, 23154, 23156 - 23158
2317	Beverages and tobacco	23159, 23160
2318	Textiles, wearing apparel, leather	23170, 23180, 23190
2320	Wood and wood products	23201- 23204
2321	Pulp, paper and paper products	23211- 23213
2322	Publishing, printing, reproduction	23221- 23223
2323	Refined petroleum products	23231, 23232
2324	Basic chemicals	23241, 23242, 23247
2325	Chemical and mineral products	23243 - 23246, 23250, 23261- 23266
2327	Basic metals	23271- 23275
2330	Machinery and other equipment n.e.c.	23281 - 23287, 23291- 23297, 23300- 23334, 23340, 23353 - 23355
2335	Building and repairing of ships	23351
2336	Oil platforms and modules	23352
2337	Furniture and other manufacturing n.e.c.	23361- 23372
2341	Production of electricity	23401
2342	Distribution of electricity, renting	23402
2343	Distribution of electricity, sales	23403
2344	Water, steam etc.	23404 - 23410
2345	Construction	22452, 23451- 23455
2351	Wholesale and retail trade	23501, 23505 - 23521
2352	Maintenance and repair of vehicles	23502, 23527
2355	Hotels and restaurants	23551, 23553
2360	Transport via pipelines	23608
2361A	Railways and trams	23601, 23605
2361B	Other land transport	23602 - 23604
2362	Air transport	23620
2363	Supporting activities for transport	23631- 23633
2364	Post and telekommuncations	23641, 23642
2365	Ocean transport	23611
2366	Inland water and coastal transport	23613
2367	Financial intermediation	23651, 23652, 23655, 23661-23670
2368	Financial intermediation services indirectly measured (FISIM)	23654, 23659
2370	Dwelling services	22704
2371	Business services etc.	23700 - 23752
2380	Education	23800
2385	Health services	23851 - 23853, 23859
2390	Other service activities	22950, 23900 - 23930

Activity classification of the quarterly national accounts (cont.)**NON-MARKET PRODUCERS, CENTRAL GOVERNMENT**

QNA- ACTIVITY	QNA- DESCRIPTION	NA- ACTIVITY
2475	Defence	24752
2480	Education	24800
2485	Health services	24851- 24853
2490	Other service activities	24601, 24631, 24632, 24670, 24730-24745, 24751, 24921

NON-MARKET PRODUCERS, LOCAL GOVERNMENT

QNA- ACTIVITY	QNA- DESCRIPTION	NA- ACTIVITY
2542	Water supply, sewage and refuse disposal, sanitation and similar activities	25410, 25900
2580	Education	25800
2585	Health services	25851- 25854
2590	Other service activities	25453, 25751, 25921

NON-MARKET PRODUCERS, NPISH

QNA- ACTIVITY	QNA- DESCRIPTION	NA- ACTIVITY
2680	Education	26800

Appendix C

Activity classification of the national accounts

Activity in national accounts	Standard Industrial Classification (NACE Rev. 1)
**** AGRICULTURE, FORESTRY AND FISHING	
010 Agriculture	01.1+01.2+01.3
014 Agricultural and animal husbandry service activities, except veterinary activities	01.4
015 Hunting, trapping and game propagation including related service activities	01.5
020 Forestry, logging and related service activities	02
051 Fishing	05.01
052 Operation of fish hatcheries and fish farms	05.02
**** OIL AND GAS EXTRACTION, MINING AND QUARRYING	
100 Mining of coal and lignite; extraction of peat	10
111 Extraction of crude petroleum and natural gas	11.1
112 Service activities incidental to oil and gas extraction excluding surveying	11.2
130 Mining of metal ores	13
140 Other mining and quarrying	14
**** MANUFACTURING	
151 Production, processing and preserving of meat and meat products	15.1
152 Processing and preserving of fish and fish products	15.2
153 Processing and preserving of fruit and vegetables	15.3
154 Manufacture of vegetable and animal oils and fats	15.4
155 Manufacture of dairy products	15.5
156 Manufacture of grain mill products, starches and starch products	15.6
157 Manufacture of prepared animal feeds	15.7
158 Manufacture of other food products	15.8
159 Manufacture of beverages	15.9
160 Manufacture of tobacco products	16
170 Manufacture of textiles	17
180 Manufacture of wearing apparel; dressing and dyeing of fur	18
190 Tanning and dressing of leather; manufacture of luggage, handbags, saddlery, harness and footwear	19
201 Sawmilling and planing of wood, impregnation of wood	20.1
202 Manufacture of veneer sheets; manufacture of plywood, laminboard, particle board, fibre board and other panels and boards	20.2
203 Manufacture of builders' carpentry and joinery	20.3
204 Manufacture of wooden containers and other products of wood	20.4+20.5
211 Manufacture of pulp	21.11
212 Manufacture of paper and paperboard	21.12
213 Manufacture of articles of paper and paperboard	21.2
221 Publishing	22.1
222 Printing and service activities related to printing	22.2
223 Reproduction of recorded media	22.3
231 Manufacture of coke oven products	23.1
232 Manufacture of refined petroleum products	23.2
241 Manufacture of basic chemicals, excl. fertilizers and nitrogen compounds, plastics in primary forms and	

Activity in national accounts (cont.)

Standard Industrial Classification
(NACE Rev. 1)

	synthetic rubber	24.11+24.12+24.13+24.14
242	Manufacture of fertilizers and nitrogen compounds, pesticides and other agro-chemical products	24.15+24.2
243	Manufacture of paints, varnishes and similar coatings, printing ink and mastics	24.3
244	Manufacture of pharmaceuticals, medicinal chemicals and botanical products	24.4
245	Manufacture of soap and detergents, cleaning and polishing preparations, perfumes and toilet preparations	24.5
246	Manufacture of other chemical products	24.6
247	Manufacture of plastics and synthetic rubber in primary forms and man-made fibres	24.16+24.17+24.7
250	Manufacture of rubber and plastic products	25
261	Manufacture of glass and glass products	26.1
262	Manufacture of ceramic products, bricks, tiles etc.	26.2+26.3+26.4
265	Manufacture of cement, lime and plaster	26.5
266	Manufacture of articles of concrete, cement and plaster, non-metallic mineral products	26.6+26.7+26.8
271	Manufacture of iron, steel and ferro-alloys	27.1+27.2+27.3
273	Aluminium production	27.42
274	Manufacture of other non-ferrous metals	27.41+27.43+27.44+27.45
275	Casting of metals	27.5
281	Manufacture of structural metal products, tanks, reservoirs, steam generators	28.1+28.2+28.3
286	Manufacture of cutlery, tools and general hardware	28.6
287	Manufacture of other fabricated metal products etc.	28.4+28.5+28.7
291	Manufacture of machinery of mechanical power and other general purpose machinery	29.1+29.2
293	Manufacture of machine-tools and special purpose machinery	29.3+29.4+29.5
296	Manufacture of weapons and ammunition	29.6
297	Manufacture of domestic appliances n.e.c.	29.7
300	Manufacture of office machinery and computers	30
311	Manufacture of electric motors, generators, transformers, and electricity distribution and control apparatus	31.1+31.2
313	Manufacture of insulated wire and cable	31.3
314	Manufacture of lighting equipment, electric lamps and other electric equipment	31.4+31.5+31.6
321	Manufacture of television and radio transmitters, communication equipment, electronic components etc.	32.1+32.2
323	Manufacture of television and radio receivers, sound or video recording or reproducing apparatus etc.	32.3
331	Manufacture of medical and precision instruments	33.1+33.2+33.3
334	Manufacture of optical instruments, watches and clocks	33.4+33.5
340	Manufacture of motor vehicles, trailers and semi-trailers	34
351	Building and repairing of ships, boats and pleasure and sporting boats	35.111+35.112 +35.113+35.116 +35.117+35.12
352	Building and repairing of oil-platforms and modules. Installation and completion work on platforms and modules	35.114+35.115
353	Manufacture of railway and tramway locomotives and rolling stock	35.2
354	Manufacture of aircraft and spacecraft	35.3
355	Manufacture of other transport equipment, incl. motorcycles and bicycles	35.4+35.5

Activity in national accounts (cont.)**Standard Industrial Classification
(NACE Rev. 1)**

361	Manufacture of furniture	36.1
362	Manufacture of jewellery and related articles	36.2
363	Manufacture of musical instruments, sports goods, games and toys etc.	36.3+36.4+36.5+36.6
371	Recycling of metal waste and scrap	37.1
372	Recycling of non-metal waste and scrap	37.2
**** ELECTRICITY, GAS AND WATER SUPPLY		
401	Production of electricity	40.101
402	Distribution of electricity, renting	Part of 40.102
403	Distribution of electricity, sales	Part of 40.102
404	Manufacture and distribution of gaseous fuels through mains	40.2
405	Steam and hot water supply	40.3
410	Collection, purification and distribution of water	41
**** CONSTRUCTION		
451	Site preparation	45.1
452	General construction of buildings etc.	45.211+45.22
453	Construction of civil engineering works	45.212+45.23+45.24+45.25
454	Building installation and completion	45.3+45.4
455	Renting of construction or demolition equipment with operator	45.5
**** DOMESTIC TRADE, REPAIR OF GOODS		
501	Sale of motor vehicles, incl. parts and accessories	50.1+50.3+50.401+50.402
502	Maintenance and repair of motor vehicles and motorcycles	50.2+50.403
505	Retail sale of automotive fuel	50.5
510	Wholesale trade and commission trade	51
521	Retail trade	52.1+52.2+52.3 +52.4+52.5+52.6
527	Repair of personal and household goods	52.7
551	Hotels and other accommodation	55.1+55.2
553	Restaurants, canteens and catering	55.3+55.4+55.5
**** TRANSPORT AND COMMUNICATION		
601	Transport via railways	60.1
602	Scheduled motor bus transport	60.211
603	Taxi operation	60.22
604	Other land transport	60.23+60.24
605	Tramway and suburban transport	60.212
608	Transport via pipelines	60.3
611	Ocean transport and coastal water transport abroad	61.101+61.102
613	Inland water transport	61.103+61.104 +61.105+61.106 +61.109+61.2
620	Air transport	62
631	Supporting activities of cargo handling and storage, other supporting land and air transport activities	63.111+63.113 +63.12+63.21 +63.23+63.401+63.403+63.409
632	Other supporting water transport activities	63.112+63.22+63.402
633	Activities of travel agencies etc.	63.3
641	Post and courier activities	64.1
642	Telecommunications	64.2

Activity in national accounts (cont.)	Standard Industrial Classification (NACE Rev. 1)
**** FINANCIAL INTERMEDIATION	
651 Central banking	65.11
652 Other monetary intermediation	65.12
654 Monetary intermediation indirectly measured	
655 Other financial intermediation	65.2
659 Financial intermediation indirectly measured	
661 Life insurance	66.01
662 Pension funding	66.02
663 Non-life insurance	66.03
669 Adjustment item, insurance	
670 Activities auxiliary to financial intermediation	67
**** REAL ESTATE, BUSINESS ACTIVITIES	
700 Real estate activities	70.1+70.202+70.3
704 Dwelling service production, for own final use	70.201+ estimated output of owner-occupiers
711 Renting of transport equipment	71.1+71.2
713 Renting of machinery and equipment and household goods etc.	71.3+71.4
720 Computer and related activities	72
730 Research and development	73
741 Legal, accounting, book-keeping and auditing activities; tax consultancy; market research and public opinion polling; business and management consultancy; holdings	74.1
742 Architectural and engineering activities and related technical consultancy	74.2+74.3
744 Advertising	74.4
745 Labour recruitment and provision of personell; investigation and security activities	74.5+74.6
747 Industrial cleaning	74.7
748 Miscellaneous business activities n.e.c.	74.8
**** PUBLIC ADMINISTRATION AND DEFENCE, COMPULSORY SOCIAL SECURITY	
751 Public administration and compulsory social security activities	75.1+75.21+75.23 +75.24+75.25+75.3
752 Defence activities	75.22
**** EDUCATION	
800 Education	80
**** HEALTH AND SOCIAL WORK	
851 Human health activities	85.1
852 Veterinary activities	85.2
853 Social work activities	85.3 - part of 85.329
854 Combined nursing activities	Part of 85.1 and part of 85.3 (for local government)
859 Social work activities by disabled workers	Part of 85.329

**** OTHER COMMUNITY AND PERSONAL SERVICES

900	Sewage and refuse disposal, sanitation and similar activities	90
910	Activities of membership organizations	91
921	Motion picture and other entertainment, new agency and cultural activities	92.1+92.3+92.4+92.5
922	Radio and television activities	92.2
926	Sporting activities and other recreational activities	92.6+92.72
927	Gambling and betting activities	92.71
930	Other service activities	93

**** DOMESTIC SERVICES

950	Private households with employed persons	95
